HOW TO READ THE TECHNICAL INFORMATION

86x50 cm Easy built-in sink
1 bowl + drainer

1 Types of installation

Barazza products are available with different types of edges and installations. Please see the flap on the right for the key.

2 Technical specifications

All technical product features are indicated in the text. The common standard equipment to all products is listed at the bottom of the page.

3 Product code

The code allows you to identify the product immediately and must be used when compiling an order.

4 Accessories

Every Barazza product has a range of dedicated functional accessories such as stainless steel bowl covers, polished steel baskets, Iroko or polyethylene chopping boards and colanders, designed to improve your work in the kitchen. For more information, please see the Accessories chapter on page 400.

5 Product pluses

The icons indicate the main unique features of each product. Please see the flap on the right for the key.

6 Base unit

"Base unit" is intended as the smallest standard unit in which the product can be installed.

7 Technical drawing

The technical drawing shows the size and technical specifications of the product. The sizes of the holes for built-in installations are indicated in the text. For flush and undermounted installations, please see the technical information sheets available at www.barazzasrl.it.

8 Tap hole

Barazza sinks come with a 3.5 cm tap hole as standard, meaning a hole does not need to be made in the kitchen worktop. Many models can be customised on request at the order stage, with two, three or five holes for a remote control or a handy soap or detergent dispenser. The optional holes are marked with a dotted line on the technical drawing.

2019

With the 2018-19 catalogue, Barazza hopes to offer a complete and coordinated range of all of its products for your perusal. Here images, details, impressions and information convey our message. Everything has been designed to make the new Barazza catalogue an essential tool for carefully choosing the product collection that best fits your wishes and your day-to-day needs in the kitchen.

BARAZZA
taste of design

CREATIVITY AS A SOURCE OF INSPIRATION.

50 years of experience have given Barazza the ambition and drive to experiment with new shapes, implement new technologies and bring together innovation and Italian design, to provide solutions that pre-empt the wants and needs of an increasingly demanding consumer base.

The result is a range of exclusive products with coordinating aesthetics, which interpret the flavours of the moment using the skills and resources of the Italian manufacturing sector. Italy is considered as a reference point on the international market for its ability to represent the best relationship between design, comfort and technology. This is backed up by our mission to offer customers products that go well beyond their expectations, and satisfy even the most unusual of size and composition requirements, with exclusive made-to-measure solutions.

INNOVATION BEHIND EVERY IDEA.

Barazza collections are created following scrupulous research and development work in the company's in-house workshop, the heart of technological innovation and Barazza's renowned creativity. Here, the most ambitious of ideas and designs come to life, upheld by cutting edge technological systems which are crucial in determining the desired end results: ergonomic, high-quality, high-performing products. We always fulfil our ambitions, and go well beyond our customers' expectations.

BARAZZA

INNOVATION AS THE SELECTION CRITERION.

At Barazza, everything we do is part of an eco-sustainable approach, using systems and materials that save energy and reduce the impact on the environment. This is in order to pursue an ideal, a vision of the world we hope to pass on to future generations. Barazza uses mainly stainless steel AISI 304 for its products. This material has a high chromium and nickel content, an ecologically sustainable raw material par excellence as it is fully recyclable, hygienic, free from toxic emissions and does not alter over time.

This company pays careful attention to the ergonomics of its products at the design stage, to guarantee maximum practicality. In the kitchen, this means energy savings and improved levels of safety and comfort.

UNI EN ISO 9001 and 14001 certification guarantees quality control and optimisation of our production processes, as well as a commitment to improving our environmental management system and a desire to optimise natural and energy resources, with a view to preventing environmental pollution.

ITALIAN SKILL AND MASTERY, A DESIRE TO BE BETTER.

The decision to set down roots in Italy – home to a wealth of inspiring natural beauty, a place in which culture and artistic tradition is palpable – provided Barazza with the tools it needed to create a unique design brand, fully representing the Made in Italy ethic. Italy is famous around the world for its unique way of doing things: creativity, flair, tradition, mastery and skill; these are all tools which Barazza has used to produce unique, highly customisable results which have become a model for those looking to imitate the famous Italian style, a model Barazza has exported to some 50 countries around the world. Barazza is a latest-generation creative workshop, working with people skilled in using the most advanced technology, combining innovation and precision, technology and passion, since the very beginning.

TELLING A TALE OF THE FUTURE, FOR 50 YEARS.

Barazza, as well as being a brand, is also a group of people. These people are brought together by a shared passion, which enables them to create quality every day. This quality is expressed producing high-performing appliances with an advanced design, thought up and manufactured at our premises. We combine the skill and precision of our craftspeople with innovative technological potential.

Barazza's adventure began in 1968 in Santa Lucia di Piave (north-east Italy) in the area known as "Inox Valley". The company is very much alive and kicking with its production facility, offices, research and development lab, spacious showroom and show-cooking area.

50

2018

TO HAVE BIG IDEAS AND TO KNOW HOW TO REALIZE THEM.

At Barazza, everyone has his or her own professional skills, and a desire to take care of each and every stage of production: from the idea, to the design, through to the final checks. At each stage, technological innovation is combined knowingly with that all-important human touch. We are professionals, fully aware that big results can only be achieved by working together. We communicate at each stage of the project, to help it grow, to produce the best product we can that meets not only quality expectations, but also satisfies our personal quest for perfection.

Barazza designs, produces, polishes and tests every single product at its facility in Santa Lucia di Piave. This is how experience materialises in quality, service and an increasingly attentive approach to the customer. This is where Italian skill and mastery become an unmistakable signature mark, one that speaks of passion and characterises every product.

SUBSTANCE IN APPEARANCE.

Stainless steel is the category of steel with the highest chromium and nickel content; this is what prevents it from rusting when exposed to air and water. Products made from stainless steel combined effectiveness with resistance, sleek lines with an elegant look. It is material of unmatched sophistication.

Barazza uses a certain quality of stainless steel for its products: AISI 304 (an acronym for the US trademark: American Iron and Steel Institute), consisting of 18% chromium and 10% nickel. This guarantees exceptional resistance to corrosion and excellent hygiene. This material represents the concept of ecological sustainability in an exemplary way, as it is fully recyclable and releases zero toxic emissions. It is the perfect example of Barazza's attention to its work and quality.

ONE MATERIAL, INFINITE POSSIBILITIES.

Steel is a unique material, ideal for undergoing different types of treatment which transform its smooth, shiny surface into an original, textured material that is soft and silky. Barazza's collections include four different steel finishes, all of which are of high aesthetic quality: Scotch-Brite satin, that is both refined and elegant; semi-polished, for a really bright, glossy look; mat, with a unique anti-fingerprint effect; and vintage, in line with industrial trends, bringing the material to life by manually working the surface to make each piece one-of-a-kind.

- ① SATIN FINISH STAINLESS STEEL
- ② SEMI-POLISHED STAINLESS STEEL
- ③ MAT STAINLESS STEEL
- ④ VINTAGE STAINLESS STEEL

BARAZZA PRODUCT CATEGORIES

Quality should always meet a need, including when it comes to space and composition options.

Barazza offers solutions designed to offer the broadest possible choice in terms of preferences and requirements, from collections made up of coordinated elements, to the Fusion line with its made-to-measure built-in surfaces, and the custom-made range offering a great opportunity for customers to create their project designs.

1

COLLECTIONS

Create your own kitchen with a matching collection.

2

FUSION

Dreaming of a single, built-in work or made to measure surface.

3

CUSTOM-MADE

We want to be able to satisfy all types of need.

COLLECTIONS

The Barazza collections offer elegant ranges of ovens, hobs, sinks, cooker hoods, taps and accessories, designed and produced in line with a highly characteristic aesthetic goal. From strictly coordinated details to different types of edging and finishes in steel, as well as handles and specific accessories: all these elements bring quality and personality to the product, to make every kitchen personal to those who live in it.

FUSION

Fusion is a single built-in steel work surface offering all of the functions you need in a design-centric space.

CUSTOM-MADE

Our custom-made products show the very best of Barazza's potential which uses its skills and experience to create infinite shapes and forms with this material. Combining cooking and washing equipment in customised sizes and finishes, customers can create made to measure solutions tailored to their specific needs and preferences. Italian skill, an eye for aesthetic beauty, and an obsession with practicality: this is the basis for our commitment to create solutions that meet personal, functional, aesthetic and value-driven needs.

TABLE OF CONTENTS

Barazza offers a comprehensive, coordinating line of ovens, hobs, cooker hoods, sinks, taps and accessories to satisfy those consumers with a clear idea of what they want, and want to let their creativity run free in the kitchen.

UNIQUE COLLECTION

An apparently spontaneous process, but in reality the result of endless meticulous assessments and fine corrections is the result of careful consideration of the vintage stainless steel. Different people, different hands at work. Absolute conformity is a futile goal. Here, it is all about the casual beauty of each and every gesture. This is how the Unique collection was created. The range consists of ovens, hobs, cooker hoods and sinks, where each and every piece is, precisely, unique.

FEEL COLLECTION

The Feel collection is the perfect synthesis of form and function. The design, made elegantly minimalist through the carefully considered combination of stainless steel and mirrored glass, introduces style considered to be an accurate reflection of the extraordinary technology featuring in this collection.

Feel covers a particularly extensive range of needs and preferences. The choice extends from 60 cm multiprogram and pyrolytic ovens, to 45 cm compact combi-steam and microwave ovens, with the option to add coordinated products such as coffee machine, blast chiller, vacuum sealer drawer and warming drawer.

CROSS PRODUCTS

All Barazza domestic appliances are fully cross-over, in the sense that they can be mixed and matched so as to fully reflect the key concept behind the brand: creating a pleasant, functional and coordinated kitchen. As part of its flexible, cross collections, Barazza offers cooker hoods; induction hobs; microwave ovens; the Easy, B_Open, B_Fast and Soul sinks; square bowls and accessorised channels.

COOKER HOODS

The collection of cooker hoods is exclusive even in its choice of materials. Made entirely from extra-thick stainless steel, these cooker hoods offer exceptional performance, thanks to powerful, innovative motors with silent operation. LED bar lighting completes the elegance and functionality of the collection. Its pure, contemporary design means it can be easily matched with the full range of Barazza products.

B_Ambient ceiling cooker hood page 270

code 1KBAS12

INDUCTION

Induction is an innovative cooking method, both in terms of performance and in terms of safety and energy savings. The use of glass ceramic gives the product an especially elegant look. The induction hobs stand out particularly for their reliability, precision and aesthetic qualities. They match perfectly with all Barazza products.

1

1 Space built-in hob page 251

REAL-TIME CONFIGURATORS

There are a wide range of options available online in real time with the new Mood Fusion, Lab Fusion and B_Free Fusion configurators, with a choice of different types of hobs and sinks available.

MOOD FUSION

Mood Fusion is a single, built-in, steel surface that includes all functions in an authentic design space, with highly distinctive features: 4 mm thick steel, Flat Eco-design burners, Soft-Touch pan supports and a draining board. Real substance, in three Barazza steel finishes: satin, vintage and matt, for a highly customised look even for the material itself.

MOOD FUSION features

1 Built-in installation

The customised worktop surface can be built-in with a 4 mm edge.

2 Soft-Touch pan supports

The new cast iron Soft-Touch pan supports are pleasant to touch, more resistant and offer a real advantage as they can be dishwasher.

SOFT TOUCH

3 Sliding chopping board

The black HPL sliding chopping board allows you to optimise the full work surface, moving the ingredients around according to the required preparation.

4 Supporting surface with grooves

The supporting surface features grooves along the surface which extend beyond the edge as it meets the bowl, opening up a new channel for the water to flow down.

Mood Fusion Configurator

The Mood Fusion configurator, available online at www.barazzasrl.it, can be used to create your own work surface, with a choice of different hobs and sinks available.

MOOD FUSION features

Finish

- 4 mm solid stainless steel AISI 304 with satin finish. Available in the vintage or mat finish on request.

Dimension limits

- Maximum length: 236 cm
- Depth: 51 and 45 cm
- Worktop thickness: 0.4 cm
- Overall gas hob height: 4 cm
- Overall induction hob height: 6 cm
- Overall bowl height: 20 cm
- Overall worktop height: 2 cm
- Outer edge radius: 0.6 cm

- Minimum distance between hob, bowl or draining board: 15 cm
- Minimum distance between two bowls: 6.4 cm
- Fixed distance between the centre of the tap hole and the bowl back edge: 4.5 cm
- Two back holes for tap and standard pop-up plug

Depth 51 cm

- Minimum distance between front edge and induction hob: 5.5 cm
- Minimum distance between side edge and induction hob: 3.5 cm
- Minimum distance between side edge and bowl: 3.4 cm
- Fixed distance from front edge to bowl: 3.4 cm
- Fixed distance from back edge to bowl: 8 cm
- Fixed distance between two tap holes: 12 cm
- Fixed length of supporting surface: 39.6 cm
- Two back holes for tap and standard pop-up plug

Dimensions for cut out

- Depth: 49 cm
- Length: -2 cm of surface dimensions

For Mood Fusion stainless steel worktop longer than 120 cm and 180 cm, Barazza recommends to consider to make two or three cut out holes respectively at a distance of 10 cm.

Depth 45 cm

- Minimum distance between side edge and bowl: 3.4 cm
- Fixed distance from front edge to bowl: 3.4 cm
- Fixed distance from back edge to bowl: 8 cm
- Fixed distance between two tap holes: 12 cm
- Fixed length of supporting surface: 39.6 cm
- Two back holes for tap and standard pop-up plug

Dimensions for cut out

- Depth: 43 cm
- Length: -2 cm of surface dimensions

For Mood Fusion stainless steel worktop longer than 120 cm and 180 cm, Barazza recommends to consider to make two or three cut out holes respectively at a distance of 10 cm.

During the design stage, check the size of the units (hob, sink, tap) in the base units below.

Lab4 page 373
Lowerable B_Free page 385
Flexi page 391
Spring page 391

Examples of Lab Fusion depth 51

Examples of Lab Fusion depth 45.5

Lab Fusion Vintage

This finish is more than just an aesthetic choice. Vintage is a textured, warm and highly practical finish that helps you to experience stainless steel in a completely different way. Beauty without compromising on practicality: the cooking and sink units are aligned on the same level. This allows the pan supports and chopping boards in steel and black HPL to slide along it: a practical feature making everyday cleaning operations easier.

Suggested combinations:

Unique page 108
Velvet Vintage page 182

Steel Shower Vintage page 380
Unique One page 383
Unique Two page 383
Unique Two Shower page 383
Soul page 389

LAB FUSION features

1 Built-in and flush installations

The customised worktop surface can be built-in (with a flat edge) or flush (perfectly aligning it with the top).

2 Sliding chopping boards

The sliding chopping boards in steel or black HPL can be used along the full length of the unit. They are a useful, practical tool both when preparing food and during cooking, according to need.

3 Bowls R. "15" and R. "12"

The bowls are available with radius "15" and "12", with limited depths. With a sophisticated design, this product is also easy to clean.

Lab Fusion Configurator

The Lab Fusion configurator, available online at www.barazzasrl.it, can be used to create your own work surface, with a choice of different hobs and sinks available.

Flush pan supports and integrated burners

The stainless steel or cast iron integrated burners and flush pan supports transform the surface into a never-ending space. In addition it allows you to move your cooking equipment around without having to pick it up, becoming a supporting surface.

LAB FUSION features

Finish

- Stainless steel AISI 304 with satin finish. Available in vintage finish on request.

Dimension limits

- Maximum length: 236 cm
- Worktop thickness: 0.1 cm
- Overall gas hob height: 8 cm
- Overall induction hob height: 6 cm
- Overall bowl height: 24.6 cm
- Overall worktop height: 5.8 cm
- Outer edge radius: 0.6 cm
- Worktop recess: 4.4 cm

- Minimum distance between hob and bowl: 15 cm
- Minimum distance between two bowls: 7 cm
- Fixed distance between a tap hole centre and bowl side edge: 3.5 cm
- Fixed distance between tap hole centre and bowl back edge: 5 cm

Depth 51 cm

- Minimum distance between side edge and bowl: 5.5 cm
- Minimum distance between side edge and bowl (with tap hole): 9 cm
- Fixed distance from front and back edge to bowls: 5.5 cm
- Perimeter edge: 1.5 cm

Dimensions for cut out

- Depth: 49 cm
- Length: -2 cm of surface dimensions

Dimensions for flush-top lowering

- Lowering: 0.12 cm
- Radius: 0.75 cm

B_FREE FUSION

As an evolution of the B_Free modular range comes B_Free Fusion, which allows you to fully personalise the work surface by equipping it with features that best suit your specific requirements. The result is a single, built-in steel work surface integrating all of the functions you need. The finishes can also be personalised. B_Free Fusion comes either in a satin or vintage finish.

Suggested combinations:

Velvet page 176

B_Free One page 376
Lowerable B_Free page 385
B_Free Kit page 387
Flexi page 391
Spring page 391

Examples of B_Free Fusion depth 51

Examples of B_Free Fusion depth 42

B_Free Fusion Vintage

The special vintage finish gives the surfaces a textured feel, and makes them more practical too by reducing the risk of scratches and stains. The material used for this finish is created with a naturally 'worn' look; it ensures you enjoy everything it has to offer.

Suggested combinations:

Unique page 108
Velvet Vintage page 182

Steel Shower Vintage page 380
Unique One page 383
Unique Two page 383
Unique Two Shower page 383
Soul page 389

B_FREE FUSION features

1 Modular cooking

The B_Free range covers everything from traditional gas cooking to more specific cooking methods such as barbecuing, teppanyaki and induction. These methods can also be combined according to need and available space.

2 Bowls R. "15" and R. "0" B_Free Fusion Configurator

The radius "15" or radius "0", with or without lowering, is available for different types of bowls to personalise your kitchen even more.

Using the B_Free Fusion configurator, available online at www.barazzasrl.it, you can create and view your own worktop by choosing different hobs and sinks available.

B_FREE FUSION features

Finish

- Stainless steel AISI 304 with satin finish. Available in vintage finish on request.

Dimension limits

- Maximum length: 236 cm
- Depth: 51 and 42 cm
- Worktop thickness: 0.6 cm
- Overall hob height: 6.4 cm

Depth 51 cm

- Minimum distance between side edge and 36/60/70/90 hobs: 1.5 cm
- Minimum distance between side edge and 100 hob: 6.2 cm
- Minimum distance between side edge and bowl: 5.5 cm or 11 cm in the case of a tap hole
- Fixed distance between the front edge and hobs and bowls: 5.5 cm
- Fixed distance between the centre of the tap hole and bowl edge: 5 cm
- Fixed distance between the centre of the tap hole and back edge: 7 cm

- Minimum distance between 36 hob and another 36/60/70/90 hob: 5.5 cm or more than or equal to 21.5 cm
- Minimum distance between 36 hob and another 100 hob: more than or equal to 21.5 cm
- Minimum distance between 60/70/90/100 hobs: more than or equal to 21.5 cm
- Minimum distance between hob and bowl: more than or equal to 15 cm
- Fixed distance between two bowls: 7 cm

Dimensions for cut out

- Depth: 49 cm
- Length: -2 cm of surface dimensions

For B_Free Fusion steel worktops longer than 120 cm and 180 cm, Barazza recommends to consider to make two or three cut out holes respectively at a distance of 3 cm.

B_FREE FUSION features

Depth 42 cm

- Minimum distance between side edge and 100 hob: 6.2 cm
- Minimum distance between side edge and bowl 34x40 rotated 90°: 6.2 cm or 11 cm in the case of a tap hole
- Fixed distance between the centre of the tap hole and the bowl edge 34x40 rotated 90°: 5 cm
- Fixed distance between the centre of the tap hole and back edge: 7 cm

- Distance between hob 100 and bowl 34x40 rotated 90°: more than or equal to 15 cm
- Fixed distance between two bowls 34x40 rotated 90°: 7 cm

Dimensions for cut out

- Depth: 40 cm
- Length: -2 cm of surface dimensions

For B_Free Fusion steel worktops longer than 120 cm and 180 cm, Barazza recommends to consider to make two or three cut out holes respectively at a distance of 3 cm.

During the design stage, for both depths, check the size of the units (hob, sink, tap) in the base units below.

FUSION HOOD

A hood at the heart of everything. The powerful yet silent motor ensures the kitchen is a pleasant place to spend time in. The Fusion hood is available in an island or wall model. The size can be customised together with the shelf, which can extend up to 240 cm. The shelf is made from stainless steel and comes in a satin or vintage finish.

FUSION HOOD

features

Finish

- Stainless steel AISI 304 with a satin finish. Shelf available in vintage finish on request.

General features

- Optional filter extraction
- Speeds: 3 + intensive speed
- Duct exit: Ø 150 mm + reducer Ø 120 mm
- Lighting: LED bar 3000 K
- Filters: stainless steel
- Functions: automatic start sensor at 40° C, filter saturation indicator, air exchange
- Energy rating: B
- Remote control included
- Maximum absorbed power: 0.3 kW

Technical features

- Air-flow: 1000 m³/h
- Pressure: 440 Pa
- Noise level: 41-72 Lw (dBA)

UNIQUE COLLECTION

Taking care of others is an art that Barazza has been improving for fifty years through its products: the end result of its years of experience and day-to-day commitment. Unique represents the essence of this way of working: a new range created to bring you into a new dimension of the story. Here there are no words; the images express clean lines and minimalist beauty. The narration is left to the sense of touch.

The grooves speak of quality and craftsmanship as you run your fingers along them; they offer something unique, something special. This is just the beginning of a long story.

Barazza offers a complete line of ovens, hobs, cooker hoods, sinks and taps: the result of excellent workmanship and advanced technology. The distinctive vintage-effect finish brings out the customised aspects of the kitchen space, transforming even the domestic appliances into unique, exclusive furnishings.

UNIQUE OVENS

Cooking up new emotions

Advanced technology and a pure design, with industrial style. Perfect in any modern furniture composition, these digital or manual ovens ensure your needs are met. Every delight can be savoured just as it should be.

UNIQUE OVENS

General features and optional elements

Triple heat reflecting internal glass

This ensures that as much heat as possible remains inside the oven, limiting heat loss through the external surfaces and keeping the temperature well below regulatory limits. This reduces energy consumption and prevents burns, should a child accidentally touch the surface.

Removable glass inside door

It is made from just one smooth surface that facilitates cleaning. The door can be removed to access the glass panels by simply removing the two screws.

Drop-down grill

The tilting action makes cleaning the top of the oven cavity easy.

Self-cleaning panels

The oven can be fitted with self-cleaning panels; the surfaces of these panels exploit the heat to start the cleaning process: grease is pulverised and can be easily removed using a damp cloth without detergents. If necessary, the panels can be easily removed.

Pyrex baking tray

As well as being resistant to impact and to high temperatures it has an elegant shape that makes it suitable for use as a serving tray.

Pizza plate

Plate made of refractory material ideal for pizzas, fancy breads and frozen foods.

Telescopic oven rails

Food and cooking instruments are easier to handle and remove thanks to a locking device at the end of the run.

Easy clean lining

The vitreous structure of the easy clean enamel makes the surfaces perfectly smooth so that cooking grease and oils simply slide off for easy cleaning. The soft hinges make the door easy to open and the lights inside make it easier to check on the contents of the oven.

Internal shelf stability

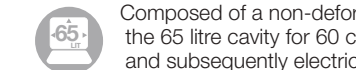

The side frames give stability to the shelves and make it perfectly safe to check the food being cooked. They can also be equipped with telescopic oven rails.

Cooling system and tangential cooling fan

It keeps external temperatures within the limits defined by safety standards. The tangential cooling fan activates when the oven is turned on and remains on until the oven is turned off; it normalises the temperature by producing a flow of cold air.

Capacity and 6 cooking levels

Composed of a non-deformable body without visible welded parts, the 65 litre cavity for 60 cm ovens allows to improve cooking times and subsequently electrical energy savings. There are 6 positions that allow you to simultaneously place more than one dish in the oven or cook large quantities of food.

Standard equipment: tangential cooling fan, side racks, 2 internal lights, easy clean enamelled steel tray, 2 stainless steel shelves, drop-down grill

FUNCTIONS

Static oven

Top heating element + bottom heating element.
For any dish, particularly suitable for baking cakes, pizzas, roasting and timbales.

Warming oven/heating dishes

Bottom heating element.
Warming biscuits, tarts and savoury pies. Heating dishes.

Browning oven

Top heating element.
Browning dishes, in particular, lasagne, pasta and vegetable timbales.

Grill

Central top heating element.
Meat of small to medium thickness and toasting bread.

Fanned grill

Central top heating element + fan.
Meat of large thickness and dishes that are particularly voluminous.

Fan assisted oven

Top heating element + bottom heating element + fan.
Rapid and even cooking. Also recommended for biscuits and pastries.

Pizza/bread and rapid heat up or keep warm function

Circular heating element + bottom heating element + fan.
Reduced combination cooking times; the oven is heated in just minutes. It is also ideal for cooking bread and pizza.

Fan assisted multilevel oven

Circular heating element+ fan.
Cooking similar or different dishes arranged on up to three shelves.

Rapid defrost function

Rapid and optimal operation.

Keep warm function

Maintains a constant temperature of 80 °C.

MICROWAVE

Advanced technology and a pure design, with industrial style. Perfectly matching with any modern furniture choices, the Barazza microwave suits your every need, thanks to its automatic cooking controls. It can also be installed with a vintage finish frame, which picks up on the finish used on the oven. Every delight can be savoured just as it should be.

MICROWAVE

Built-in microwave

NEW

- 9 functions
- automatic programming for 8 types of food
- capacity: 24 litres
- characteristics: stainless steel 18/10 inside, glass inner door, double-glass side-opening door
- maximum absorbed power: 3.1 kW
- vintage stainless steel frame kit to insert the 1MOA microwave oven

ST. STEEL/ VINTAGE ST. STEEL

code 1MOACV

Standard equipment: 1 inside light, raised removable grill rack, extractable turntable plate, pizza/baking tray.

FUNCTIONS

Defrost function

Rapid and optimal operation.

Rapid defrost function

Recommended for foods weighing more than 500 grams. The level and weight must be set. Operating level 1 for meat, fish, vegetables and beverages; level 2 for bread, sandwiches and pasta.

Simmer

For cooking fish and poultry and finishing off dishes prepared using the cooking function.

Heating

For rapidly heating foods to the desired temperature.

Cooking

For cooking food rapidly.

Low grill

For cooking au gratin and browning delicate foods.

High grill

For grilling meat and fish.

Microwave + grill

The microwaves provide rapid and even cooking. Combined with the grill, food can be grilled and browned. Ideal for cooking au gratin and browning foods of reduced thickness using the raised removable grill rack.

Craquine

For rapid cooking to create crisp, delicious and golden dishes, comparable to those that come out of a traditional oven; always use with the pizza/baking tray.

AUTOMATIC COOKING PROGRAMMES

After having selected the type of food, the weight and the function (defrosting, heating, cooking, grill and microwave), the oven will automatically calculate the cooking time.

Drinks

Fish

Pork/Veal/Turkey

Ready-made fresh foods

Beef/Lamb

Vegetables

Poultry

Ready-made frozen foods

UNIQUE HOBS

Everything you need is to hand

Bold, minimal, solid: the Unique hobs perfectly interpret the industrial vintage style of this collection. The knobs are a stylistic reinterpretation of models from Barazza's archives. They emphasise the idea of a lived-in space and balance the overall look, suspended between innovation and reviving tradition.

UNIQUE HOBS General features and optional elements

Triple ring

Three flame rings that use the power provided by the flame as best and as evenly as possible, in order to ensure rapid and even cooking.

Cast iron supports

Made of cast iron, just like those used in professional kitchens, they are particularly solid, resistant to heat and therefore long-lasting. They improve the distribution and maintenance of heat. Special rubber tips ensure stability in addition to preventing scratches to the surface.

Easy installation

Unique hobs consist of a single unit that makes it easy to install with tops. This is also helped by the fact that no air adjustment is required with either methane or liquid gas operated hobs.

Automatic ignition and rapid safety valve

The gas is ignited and adjusted with one hand using the knob. With all Barazza gas hobs, the spark plus is inside the burner, under the cover, away from liquids which may drip from the cooking equipment and from any damage which may be caused during cleaning. The rapid safety valve blocks the gas flow, even with the tap on, if the flame accidentally goes out.

It is activated when the burner is alighted and, thanks to the rapid thermocouple, it takes just seconds to function.

Air inlets

Unique gas hob burners draw in the air needed for combustion from above. This ensures that the movement of any unit doors below does not create air flow that may affect normal operation.

Eco-flame

Burners with steady flames and hotplates, which provide high heat yields, accompany the Unique gas hobs; they optimise energy consumption and reduce emissions of toxic substances by more than 50% when compared to the regulatory requirements.

Extractable one-piece burners

Unique gas hobs are equipped with easily extractable one-piece burners, greatly facilitating cleaning operations.

Hob structure

The Unique hob surfaces are completely level and the seals prevent any infiltration.

Cast iron wok adapter

For using woks for frying, stewing, sautéing, braising or steam cooking. As an optional on request, it is suitable for burners with a triple ring.

Lowered edge built-in (LEB)

The edge of the Unique hobs rounds off with an oblique angle.

The same matching finish for all products in the Unique range

The hobs and sinks in the Unique collection match perfectly as they have the same type of edging.

UNIQUE HOODS

Something smells good

The stainless steel extra-thick cooker hoods offer excellent performance, thanks to powerful, silent motors which help to ensure the environment is pleasant.

UNIQUE HOODS

General features

Stainless steel

The whole cooker hood structure and its parts are in AISI 304 stainless steel.

Motor power

Unique cooker hoods have a power of 800 cubic metres an hour.

Design steel filters

The filters are made of AISI 304 stainless steel and stand out for their unusual and refined design.

LED bar

Unique cooker hoods are equipped with LED bar lighting (temperature 4000 K). Long-lasting and efficient, it reduces energy consumption.

Telescopic vent

The height of the hose can be adapted to suit specific needs.

UNIQUE SINKS

Where everything flows

These sinks feature a unique treated steel finish, great linear aesthetics and an ergonomic design which makes it easy to work freely and handle tableware easily. Available with one or two bowls in different sizes.

UNIQUE SINKS

General features and optional elements

Extra thick stainless steel

 The Unique sinks are made from extra-thick AISI 304 stainless steel which is fully recyclable, resistant to corrosion and extremely hygienic. It also does not alter over time.

Space-saver trap

This space-saving trap takes up less space under the sink.

Perimeter overflow

 This is a safety feature in the event a tap is left running; the overflow hole is on the perimeter.

Capacious bowls

 The Unique sinks have capacious bowls which can easily hold pans and larger kitchen utensils.

Pop up

 It allows you to empty the bowl without having to place your hands inside the bowl itself. It is useful for avoiding splashing or burning yourself, if the water is hot.

Bowl with R. "15"

 Unique sinks come with R. "15" bowls which make them easy to clean, without compromising on the design.

Round basket strainer waste with cover

 Barazza basket strainer wastes are approved by LGA that certifies 100% conformity with standard EN274. Stronger, thanks to the increased thickness of the stainless steel and plastic materials, they are equipped with a seal that ensures the water remains in the bowl, in full compliance with regulations, even if the bowl is dirty. Maximum water-tightness also on the join between the trap and the basket strainer waste. To stop the plastic components from deforming following a thermal shock, the screw on the strainer is protected by a brass bushing. Barazza waste disposers can be used with the 3 1/2" basket strainer waste (compatibility not guaranteed with other brands of waste disposers). The stainless steel strainer cover adds elegance to the sink.

Stainless steel rectangular bowl cover with black HPL chopping board

The practical black HPL chopping board slides inside the perforated stainless steel colander tray. Together they create a handy, multi-purpose surface, useful for cutting, rinsing, draining or simply resting something down. The bowl cover is also available without the chopping board. Dimensions: 25x43.

Rectangular chopping board

Practical white polyethylene or black HPL chopping board 26x43.

Glass bowl cover

This elegant glass bowl cover measuring 30x43 creates even more uses for the sink area.

Stainless steel colander with draining-rack

Stainless steel rack for washing and draining plates, glasses and cutlery. It can also simply be used as a place for resting things. Dimensions: 25x43.

Stainless steel colander

Multipurpose colander, useful for cleaning, washing and draining. Dimensions: 15x43.

Roll-Up multi-purpose rack

A practical, multi-purpose rack which can be used as a drainer or trivet, and can be easily stored away in small spaces. Dimensions: 40x44.

OVENS types

60 cm multiseven oven

Electric oven with 6 manual cooking programs and rapid defrost function, equipped with a top and bottom heating element and fan.

60 cm multifunction oven

Electric oven with 8 manual cooking programs and rapid defrost function, equipped with a top, bottom and circular heating element and fan.

60 cm multiprogram ovens

Multifunction electric oven with 8 manual cooking programs and rapid defrost function. The digital programmer let you control and manage cooking cycles with automatic activation and deactivation; it also acts as a timer and a buzzer.

60 cm Touch Control multiprogram ovens

Multifunction electric oven with 10 manual cooking functions and 16 automatic cooking programs. The Touch Control programmer acts as a timer and a buzzer; it let you program the cooking cycle with automatic activation and deactivation (Feel ovens excluded).

60 cm Touch Screen multiprogram ovens

Multifunction electric oven with Touch Screen display, featuring 16 million colours allowing you to control the functions by simply touching the appropriate symbol. 10 manual cooking programs, 16 automatic cooking programs, possibility of storing 36 cooking programs. Software in 8 languages to set and customise programs, follow instructions and diagnose possible operating errors.

60 cm pyrolytic oven

Self-cleaning oven equipped with a pyrolysis function, which eliminates food residue by means of a high temperature cycle.

90 cm multiprogram oven

Multifunction electric oven, 8 manual cooking programs. The digital programmer for managing cooking cycles also acts as a timer and a buzzer; it also let you program cooking times, allowing for automatic activation and deactivation.

Microwave

Electric microwave oven with 9 manual cooking programs and automatic programming for 8 types of food. For heating, defrosting and grilling evenly and rapidly.

Compact combi-steam oven

Compact oven which combines steam cooking with static cooking for rapid and healthy cooking.

Compact combi-microwave oven

Compact electric oven which combines microwave cooking with convection cooking for rapid cooking times.

OVENS types

60 CM AND 90 CM MULTISEVEN, MULTIFUNCTION AND MULTIPROGRAM OVENS

MANUAL COOKING FUNCTIONS

Static oven

Top heating element + bottom heating element. For any dish, particularly suitable for baking cakes, pizzas, roasts and timbales.

Warming oven/heating dishes

Bottom heating element. Warming biscuits, tarts and savoury pies. Heating dishes.

Browning oven

Top heating element. Browning dishes, in particular, lasagne, baked pasta and vegetable flans.

Grill

Central top heating element. Meat of small to medium thickness and toasting bread.

Grill and rotisserie (2 operating levels)

Central top heating element + rotisserie. It is recommended for cooking all meats on the rotisserie.

Fanned grill

Central top heating element + fan. Meat of large thickness and dishes that are particularly voluminous.

Fanned grill and rotisserie

Central top heating element + fan + rotisserie. It is recommended for cooking voluminous meats on the rotisserie.

Fan assisted oven

Top heating element + bottom heating element + fan. Rapid and even cooking. Also recommended for biscuits and pastries.

Pizza/bread and rapid heat up or keep warm function

Circular heating element + bottom heating element + fan. Reduced combination cooking times; the oven is heated in just minutes. It is also ideal for cooking bread and pizza.

Fan assisted multilevel oven

Circular heating element + fan. For cooking similar or different dishes arranged on up to three shelves.

Rapid defrost function

Rapid and optimal operation.

Keep warm function

Maintains a constant temperature of 80 °C. It is available with the Touch Control Touch Screen multiprogram ovens.

AUTOMATIC AND CUSTOMISED COOKING PROGRAMS

In addition to a series of manual cooking programs, the Touch Control and Touch Screen multiprogram ovens also have automatic cooking programs. Once you have selected the function, the relative cooking mode automatically activates. With Touch Screen ovens, it is also possible to save manual programs and their combinations generating a list of up to 36 customised programs.

Pizza and bread

Frozen pizza, home-made pizza and bread.

Timbales

Lasagne, pies.

Meat and fish

Roast pork, roast veal, roast lamb, chicken, whole fish, fish au gratin.

Cakes

Sponge cake, tarts.

Vegetables

Roast potatoes, grilled vegetables, tomatoes au gratin.

60 CM AND 90 CM MULTISEVEN, MULTIFUNCTION AND MULTIPROGRAM OVENS general features

Capacity and 6 cooking levels

65 Composed of a non-deformable body without visible welded parts, the 65 litre cavity for 60 cm ovens allows for improved cooking times and subsequently electrical energy saving. There are 6 positions that allow you to simultaneously place more than one dish in the oven or cook large quantities of food.

Triple heat-reflecting internal glass

These ensure that as much heat as possible remains inside the oven, limiting heat loss to external surfaces and keeps the temperature well below regulatory limits, subsequently reducing energy consumption and avoiding a situation where a child may burn themselves if they were to accidentally touch these surfaces (excluding Feel combination steam, combination microwave, pyrolytic and Officina Multiseven oven).

Easy clean or stainless steel lining

EASY CLEAN The vitreous structure of the easy clean enamel makes the surfaces perfectly smooth so that cooking grease and oils simply slide off for easy cleaning. With some models, the oven lining is available entirely in 18/10 type stainless steel. The soft hinges facilitate the door opening and the interior lights make monitoring the contents of the oven easier.

Drop-down grill

As the top of the 60 cm oven can be tilted, cleaning the top of the oven cavity is made much easier (excluding Feel combination steam and pyrolytic ovens and Officina Multiseven oven).

Cooling system and tangential cooling fan

Maintains external temperatures within the limits as defined by the safety standards. The tangential cooling fan activates when the oven is turned on and remains on until the oven is turned off; it normalises the temperature by producing a flow of cold air.

Removable glass inside door

It is made from just one smooth surface that facilitates cleaning operations. The door can be removed in order to access the glass panels by simply removing the two screws.

Internal shelf stability

The side frames give stability to the shelves and make it perfectly safe to check the food being cooked. They can also be equipped with telescopic oven rails (excluding Feel and Officina ovens).

Energy rating

A All Barazza ovens have an A energy rating: maximum efficiency to optimise performance and save energy. Barazza works within a mindset of eco-sustainability, using environmental resources properly with future generations in mind.

60 CM AND 90 CM MULTISEVEN, MULTIFUNCTION AND MULTIPROGRAM OVENS optional elements

Pizza plate

Plate made of refractory material ideal for pizzas, fancy breads and frozen foods.

Pyrex baking tray

As well as being resistant to impact and to high temperatures it has an elegant shape that makes it suitable for use as a serving tray. Available with 60 cm ovens (excluding Feel and Officina ovens).

Telescopic oven rails

Food and cooking instruments are easier to handle and remove thanks to a locking device at the end of the run (excluding Feel and Officina ovens).

Self-cleaning panels

The oven can be fitted with self-cleaning panels the surfaces of which exploit the effect of the heat in order to start the cleaning process: grease is pulverised and can be easily removed using a damp cloth without detergents. If necessary, the panels can be easily removed (excluding Feel and Officina ovens).

FEEL

The Feel collection is synonymous with the perfect synthesis of form and function. The elegantly minimalist design with the carefully considered combination of stainless steel and mirrored glass introduces a state-of-the-art style into the kitchen, a reflection of the technological excellence which characterises the models of this collection and all other collections carrying the Barazza name.

FEEL a complete collection

Compact combi-steam oven

45 cm compact oven which combines steam cooking with static cooking for rapid and healthy cooking.

Compact combination microwave oven

45 cm compact oven which combines microwave cooking with convection cooking for rapid cooking times.

Coffee machine

45 cm coffee machine for the preparation of espresso, cappuccino and other hot drinks.

Warming drawer

Warming drawer for drinks and tableware with push-pull opening mechanism, to be included below the elements which make up the collection.

Multiprogram oven

60 cm multifunction oven with 11 manual cooking programs and temperature probe with Touch Controls which activate at the lightest touch display.

Pyrolytic oven

60 cm self-cleaning oven equipped with a pyrolysis function which eliminates the food residue by means of a high temperature cycle.

Blast chiller

45cm blast chiller equipped with 11 functions, of which 7 cold and 4 hot, with Touch Screen controls.

Vacuum sealer drawer

Vacuum sealer drawer with push-pull opening mechanism also equipped with marinating function.

FEEL COLLECTION general features

Stainless steel handle with an ergonomic design

The design of the handle is inspired by the elegant and minimalist aesthetics of the collection and allows perfect alignment of the shapes which make up the Feel range. The dimensions and ergonomic grip characterise the style and make it easy to use.

Touch Control and Touch Screen commands

The elements of the Feel collection are equipped with a digital programmer with touch-sensitive Touch Controls, that, with a single touch, allow you to define times and functions. The Feel blast chiller is equipped with Touch Screen controls.

Anti-touch finish

The surfaces in stainless steel are treated with a special anti-fingerprint coating which keeps it pristine and simplifies normal cleaning operations.

Energy Rating A

Ovens of the Feel collection fall within Energy Rating A: maximum efficiency for performance optimisation and energy saving. Barazza works within a mindset of eco-sustainability, using environmental resources to the advantage of future generations.

Complete freedom in terms of installation

The advanced modularity of the Feel collection means that we can choose from numerous combinations and installation methods, both vertical and horizontal. The figure shows just a few of the main configurations possible.

FEEL COLLECTION Feel Good System

Feel Good is the innovative healthy system for cooking and preserving food, consisting of the vacuum sealer drawer, blast chiller and combination steam oven. The temperature blast chiller allows cooked or uncooked food to be chilled or frozen, without altering the aromas and organoleptic properties, while by using the vacuum sealer drawer food can be preserved longer in the fridge or freezer, to then be cooked or regenerated directly in the steam oven.

FEEL COLLECTION Feel Good System

Feel Good Preservation cycle

- Prepare the uncooked food
- Vacuum seal
- Blast chill and store

Feel Good Cooking cycle

- Prepare the uncooked food
- Vacuum seal
- Blast chill and store
- Cook sous-vide / cook traditionally
- Blast chill / vacuum seal if cooking traditionally
- Store
- Bring back to temperature

FEEL GOOD SYSTEM STAGES

Vacuum sealer drawer code **1CSFY**
See pages 164 - 167

After having prepared the food, place it in a preservation or cooking bag and vacuum seal it. Thanks to this procedure, food will last 3 to 5 times longer than food which is preserved in a traditional way, avoiding unnecessary food waste.

Blast chiller code **1ABFY**
See pages 160 - 163

Blast chill the food with the dedicated function, to seal the properties of the food when they are at their best and keep them unaltered over time.

Steam oven code **1FVCFY**
See pages 146 - 149

The food in the vacuum sealed bags can be cooked in the steam oven. The cooking bags can withstand temperatures of up to 121 °C and are used differently depending on the type of food and type of cooking method: 50-60 °C for blue meat, 60-65 °C for roast meat cooked rare, 70 °C for well-done meat, 85 °C for starch conversion (for example, boiled potatoes), 90-100 °C for boiled vegetables.

ADVANTAGES AND BENEFITS OF THE FEEL GOOD SYSTEM

Health

Feel Good is the healthiest way to cook and preserve food, allowing the vitamin and mineral content of the food as well as the organoleptic properties to be maintained.

Hygiene

Feel Good ensures the hygiene and safety of food during cooking.

Time and efficiency

With Feel Good you can combine use of the steam oven, blast chiller and vacuum sealer drawer, maximising the use of the raw materials and thereby improving the organisation and speed with which you can work.

Home economics

Feel Good is the ideal way to cook and preserve food to lengthen the lifespan of the products, reduce waste and serve food of a high quality with controlled costs.

Feel combi-steam oven

The Feel compact combination oven provides hot-air static cooking methods with steam cooking. Steam cooking, the fast and healthy way to cook, does not require oils or condiments, preserves the vitamin, protein and mineral content of the foods as well as their organoleptic properties, maintaining the flavour, consistency and appearance of the food.

BARAZZA

The steam oven is part of the Feel Good system, consisting of the blast chiller, vacuum sealer drawer and steam oven.

SISTEMA **FEEL**
Good

See pages 144 - 145

FEEL COMPACT COMBI-STEAM OVEN features

Combi function

The combi function allows foods such as roasts, poultry, fish, potatoes and first courses to be cooked using hot air and steam to cook quickly and in a healthy way.

Stainless steel internal lining and large cooking cavity

The internal surface areas are available in the elegant version in stainless steel 18/10. The horizontally positioned water tank makes the oven chamber particularly large, therefore with a greater capacity and easier to use.

FEEL COMPACT COMBI-STEAM OVEN

FUNCTIONS

Regeneration and sterilisation

For heating through dishes and precooked food, sterilising and preparing fruit jams and marmalades.

- R1 - Plate warming
- R2 - Regeneration of precooked and frozen food
- R3 - Sterilisation of Beans
- R4 - Sterilisation of Cherries
- R5 - Sterilisation of Plums

Fanned grill

For roasting meat, fish, poultry or vegetables.

Grill

For quickly browning the outside of the food.

Fan assisted oven

Cooking is comparable to a traditional electric oven.

Fan assisted oven + steam (combi)

This function can be used for cooking meat leaving it crispy on the outside, especially roasts, fish, poultry or side dishes, quickly and healthily.

Steam

For cooking all types of vegetables, rice, cereals and meat. This function is particularly suitable for extracting the juice from berries, as well as for defrosting and then cooking vegetables.

AUTOMATIC COOKING PROGRAMS

For automatically cooking dishes by simply selecting the desired cooking method and setting the weight of the food.

P1 - For cooking vegetables, fish and side dishes

- A1 - Broccoli
- A2 - Cauliflower
- A3 - Chopped potatoes
- A4 - Trout
- A5 - Prawns
- A6 - Fillet of fish
- A7 - Sweet dough balls
- A8 - Dough balls
- A9 - Bread dumplings

P2 - For cooking different types of bread

- B1 - Bread rolls
- B2 - Frozen bread rolls
- B3 - Fresh dough
- B4 - White bread

energy rating **A**

- 6 functions
- 20 automatic cooking programs
- Touch Control digital programmer
- capacity: 32 litres (35 litres total)
- features: stainless steel oven lining, door with triple and heat-reflecting glass
- safety devices: electronic child safety lock
- maximum temperature: 220 °C
- maximum absorbed power: 2.9 kW

ANTI-TOUCH STAINLESS STEEL/MIRROR

code 1FVCFY

Standard equipment: stainless steel handle, side racks, internal light, 1 stainless steel rack, 1 stainless steel tray, 1 stainless steel drip tray with perforated base.

ADVANTAGES AND BENEFITS OF STEAM COOKING

Steam cooking is universally recognised as being the most healthy way to cook. In fact, it does not alter the vitamin and mineral content of the foods and provides significant benefits and advantages:

- it preserves the organoleptic properties of the food exceptionally well, maintaining its flavour, appearance and consistency, especially when it comes to delicate foods such as white meats, fish, shellfish and vegetables;
- it prevents the formation of substances which are difficult to digest, toxic or carcinogenic;
- it does not require oils or other condiments during cooking and, thanks to the special perforated drip tray, it prevents the fat which has melted due to the heat from staying in the cooking equipment which is in contact with the food, providing benefits in terms of digestibility and the caloric impact of foods;
- thanks to the reduced temperatures and the lack of direct contact with boiling water, it guarantees the preservation of most of the thermolabile vitamins present in foods, particularly in vegetables;
- it is both practical and extremely quick, to the advantage of energy savings and the quality of the cooking.

Feel combi-microwave oven

The compact combination microwave oven provides the option of traditional convection cooking as well as microwave cooking. The combi functions allow the two cooking methods to be combined, an ideal solution for cooking lasagne, timbales, poultry and oven baked potatoes extremely quickly.

FEEL COMPACT COMBI-MICROWAVE OVEN characteristics

Stainless steel internal lining, baking trays in pyrex, turntable plate and raised rack

The internal surface areas are available in the elegant version in stainless steel 18/10. The oven also comes with a pyrex baking tray, resistant to impact and high temperatures and which can also be brought to the table. The rotating plate completes the range of accessories, ensuring that the dishes are cooked evenly without having to be handled and moved.

Stainless steel handle with an ergonomic design

The design of the handle is inspired by the elegant and minimalist aesthetics of the collection and allows perfect alignment of the shapes which make up the Feel range. The dimensions and ergonomic grip characterise the style and make it easy to use.

FEEL COMPACT COMBI-MICROWAVE OVEN

FUNCTIONS

Defrost function (time)

To quickly defrost any type of food on the basis of the programmed time.

Defrost function (fish)

A choice of 5 programs to quickly defrost any type of food by setting the weight.

- Pr1 - Meat
- Pr2 - Poultry
- Pr3 - Fish
- Pr4 - Fruit
- Pr5 - Bread

Fanned grill

For roasting meat, fish, poultry or vegetables.

Fan assisted oven + microwave (combi)

For cooking and roasting reducing cooking times further.

Fan assisted oven

Cooking is comparable to a traditional electric oven.

Microwave + grill

Especially for cooking lasagne, poultry, roast potatoes and timbales.

Grill

For quickly browning the outside of the food.

Microwave

Ideal for cooking or reheating vegetables, potatoes, rice, fish or meat.

AUTOMATIC COOKING PROGRAMS

For automatically cooking and reheating dishes by simply selecting the desired cooking method and setting the weight of the food.

P1 - For reheating different types of foods

- A01 - Soups
- A02 - Ready-cooked meals (containing compact ingredients)
- A03 - Ready-cooked meals (for example, stews)
- A04 - Vegetables

P2 - For cooking fresh food

- B01 - Potatoes
- B02 - Vegetables
- B03 - Rice
- B04 - Fish

P3 - For defrosting and then cooking different types of foods

- C01 - Pizza
- C02 - Ready-cooked meals
- C03 - Potato based dishes

- maximum temperature: 200 °C
- maximum absorbed power: 3.4 kW

ANTI-TOUCH STAINLESS STEEL/MIRROR

code 1MCFY

Standard equipment: stainless steel handle, interior light, rotating plate, 1 raised rack in stainless steel, 1 pyrex baking tray, 1 pizza plate.

ADVANTAGES AND BENEFITS OF MICROWAVE COOKING

Unlike conventional cooking in which the heat generated by the heating elements works from the outside in, microwave cooking allows the heat to spread from the inside out, without being dispersed in the air, on the walls of the oven and on the containers. There are considerable benefits and advantages offered by this cooking method:

- the speed with which the foods cook preserves their flavour, appearance and mineral and vitamin content;
- it ensures shorter defrosting times compared to a traditional oven, thereby reducing the possibility of bacteria forming;
- thanks to a reduction in cooking times, it offers energy savings of up to 75% compared to conventional cooking.

Feel coffee machine

The Feel coffee machine let you make espresso coffee, cappuccino and other hot drinks just like you would find in a café.

FEEL COFFEE MACHINE features

Advanced functions

The Touch Control programmer let you choose between a short, normal or long coffee and also let you select the strength of the coffee. It is also possible to set the water temperature which is most suitable for enhancing the aroma of the different coffee blends.

LED lighting

The LED lighting makes the machine both elegant and efficient, highlighting the design, and ensuring low consumption and a long service life.

Stand-by function

With a view to saving energy, the device can be put into stand-by mode.

Easy to use

The simplified layout of the service door means that it is easy to fill the machine with both water and coffee and also to remove the coffee residue.

Telescopic dispensing unit

The telescopic dispensing unit allows cups of different heights and sizes to be used.

Coffee container capacity

The coffee container can hold 220 g. coffee beans.

FEEL COFFEE MACHINE

FUNCTIONS

Automatic programming

It is easy to set the coffee machine automatic on/off time.

Ground coffee

Ground coffee can be used.

Steam dispensing

For cappuccino, for heating different types of drinks.

Hot water dispensing

For preparing different types of drinks.

Coffee measurement

A choice of 6 different strengths: extra-light, light, normal, strong, extra-strong, ground.

No. cups

You can choose to make one or two cups of coffee at the same time.

Cup type

5 possible coffee amounts (espresso, small cup, medium sized cup, large cup, mug).

RECIPES

Italian cappuccino

This is a normal coffee with the addition of milk heated by steam, which softens the flavour of the coffee and creates a consistent and pleasant froth on the top. It is served in a large cup. Put cold milk into a tall jug and use the steam jet, just add the froth to espresso, tilting and swinging the jug, or using a spoon. You can also sprinkle some cocoa on the top of the froth.

Viennese Cappuccino

The age-old Austrian tradition produced this variation. Prepare a long espresso (extraction lasting 30-35 seconds), add warm milk and put whipped cream on top, serve in a cup which is between the size of an espresso cup and a cappuccino cup. Decorate with chocolate shavings.

Iced espresso

Light and airy, and beautifully refreshing, a real pleasure on hot days. Prepare an espresso coffee, add sugar, pour straight into a cocktail shaker with large cubes of ice, and shake for a few seconds. Serve in a tumbler or a flute.

Irish coffee

Energetic and fortifying. In a tall warmed glass, mix eight parts hot coffee with one part whiskey and cane sugar. Pour over some freshly whipped cream letting it slide down the bottom of a spoon, this will create a good layer of fresh cream on top of the hot coffee.

Mexican Coffee

Intense and exotic. In a small coffee cup, mix and beat together some double cream, ½ teaspoon cinnamon, a pinch of nutmeg and sugar. Pour a teaspoon of chocolate syrup into a medium sized cup, a little more cinnamon, the coffee and mix well.

Cappuccino ice-cream

In a small saucepan, heat 2 cups of espresso, ¾ cup of whipping cream, ½ cup of sugar and bring to the boil. When it has cooled down and is tepid, put it in the fridge for 4-5 hours. Serve two or three scoops in a small bowl.

Warming drawer Feel

The Feel warming drawer, in-built below the elements which make up the Feel collection, not only keeps food warm but also let you defrost food, prove dough, warm tableware and cook delicately at low temperatures. It has an easy yet quick push-pull opening mechanism which highlights the formal purity of the stainless steel surfaces.

FEEL WARMING DRAWER built-in

Feel built-in warming drawer

- for warming plates, tableware, coffee cups
- keep warm function
- defrost function
- leavening
- adjustable temperature from 30 °C to 70 °C
- operating light
- cold front panel
- features: smooth stainless steel internal lining with non-slip mat, telescopic rails, push-pull opening mechanism
- maximum absorbed power: 0.4 kW

ANTI-TOUCH STAINLESS STEEL

code 1CEFY

Feel Blast Chiller

An amazing feature, allowing you to enjoy the freshness of food every day: the blast chiller is able to lock in the qualities of the food when they are at their very best, and maintain them over time. This way, foods last longer and their colour, freshness and taste are preserved.

It becomes an indispensable tool which can be used to optimize time management when cooling and means that the quality and consistency of food can be enjoyed at its best.

The blast chiller is part of the Feel Good system, consisting of the blast chiller, vacuum sealer drawer and steam oven.

SISTEMA **FEEL**
Good

See pages 144 - 145

FEEL BLAST CHILLER features

Functionality

The blast chiller helps food last longer and preserves their colour, freshness and taste. It is more commonly used in professional kitchens because it significantly reduces the time required to prepare recipes, but nowadays it is also becoming popular in domestic kitchens. Equipped with 11 functions, of which 7 cold and 4 hot. The Touch Screen display let you select programs intuitively and, by pressing and holding the symbol of the desired function for a few seconds, a short guide can be viewed. Software available in 6 languages.

FEEL BLAST CHILLER

COLD FUNCTIONS

Blast chill function: +3 °C

Bacteria and chemical substances act rapidly at temperatures of between 10 °C and 65 °C thereby causing food to deteriorate. By subjecting the foods to blast chilling, the water present in the foods does not evaporate and the nutritional properties are retained.

With this program food can be kept in the fridge for 5 - 7 days.

Freeze function: -18 °C

With rapid freezing, cooked or raw food is quickly brought to -18 °C, allowing it to be stored in the freezer for several months, keeping its organoleptic properties intact.

Pre-cool function

With this function, the blast chiller is used at maximum power for 20 minutes. Food is not to be put inside the appliance but it serves to cool the cavity of the blast chiller thereby preparing it for the chilling function.

Cool down function

When hot food is placed inside, the cooling cycle is started which introduces cold air for 5 to 30 minutes.

Bottle function

This function cools liquids at a rate of 1 degree/minute.

Preserve function at +3 °C

This function reproduces the favourable conditions for food storage with a constant temperature of 3 °C. The cycle has a maximum duration of 36 hours during which time the appliance carries out periodic defrost cycles.

Raw fish function

This function, known as "sanitation", involves a cooling cycle at -30 °C which last 24 hours. The aim is to eliminate Anisakis, a parasite that can be destroyed by a long cooking process or a prolonged storage period at -30 °C. While this function is in operation, the appliance carries out periodic defrost cycles.

HOT FUNCTIONS

Defrost function: +4 °C

This cycle brings a food from freezing temperature to 4 °C without losing fluids and without starting cooking, avoiding transformation of the protein that occurs when the meat is defrosted in the microwave.

Ready for the table

This function involves reheating a dish which has been kept in the fridge. There are two possible methods: immediate and delayed. With the immediate function, the temperature ranges from 25 °C to 50 °C with an interval range of 15 to 60 minutes. With this setting, the appliance automatically adjusts the intensity of the ventilation and activation of the electric heating element. With the delayed method, the food is heated at the end of the set waiting period which can vary from 1 to 10 hours during which time the food is kept at a temperature of +4 °C. At the end of the cycle the heat is maintained for 30 minutes, at the end of which the food is again kept at +4 °C.

Slow cook function

With this function, food can be cooked at a low temperature using one of two modes: immediate and delayed. Using the immediate mode, cooking starts at a temperature ranging from 40 °C to 75 °C for a period of 3-11 hours. With this setting, the appliance automatically adjusts the intensity of the ventilation and activation of the electric heating element. With the delayed method, the food is cooked at the end of the set waiting period which can vary from 1 to 10 hours during which the food is kept at a temperature of +4 °C. At the end of the cooking cycle the heat is maintained for 30 minutes at the end of which the food is again kept at +4 °C.

Leavening

This program creates a micro-climate with controlled temperature and humidity, to facilitate and activate the transformation of yeasts. By programming how long the dough can rise for, we can reduce the amount of yeast used in a recipe, thereby obtaining a lighter product, which is easier to digest. You can choose between 3 methods of proving: immediate, where the process starts immediately; preserved, where the process is immediate but at the end the dough is kept at an ideal storage temperature; lastly, the delayed method lets you start the process after an initial storage period that can vary from 3 to 24 hours.

ANTI-TOUCH STAINLESS STEEL/MIRROR

code 1ABFY

Standard equipment: stainless steel handle, side racks, internal light, 2 stainless steel racks, temperature probe.

Feel vacuum sealer drawer

Vacuum sealing provides two specific results: foods are preserved for long periods of time and we can avoid waste. Food is preserved in two types of bags, those used to simply store the food and those which are also suitable for steam cooking or bain-marie. The cooking bags withstand different cooking temperatures depending on the type of food and cooking time required, for taste and quality like you have never experienced before.

The vacuum sealer drawer is part of the Feel Good system, consisting of the blast chiller, vacuum sealer drawer and steam oven.

SISTEMA **FEEL**
Good

See pages 144 - 145

FEEL VACUUM SEALER DRAWER features

Functionality

By vacuum sealing, foods are preserved for long periods of time, avoiding unnecessary waste. We can also cook the foods which have been stored in vacuum sealed bags. There are two types of bags, storage only and storage plus cooking.

FUNCTIONS

3 levels of vacuum sealing

Bag sealing at three levels and vacuum sealing at three levels depending on what kind of food is sealed in the bag.

Vacuum sealing in a box

In some cases, we need to prevent delicate foods from being crushed, such as homemade pasta, salad, berries, mousses or whipped cream. For this reason, the vacuum sealer drawer can be used with rigid containers, available upon request.

Chef function

With this function, meat can be massaged, cold infusions and marinating can be carried out in 8-12 minutes rather than 48-72 hours, namely, the time required for traditional marinating.

FEEL VACUUM SEALER DRAWER

FUNCTIONS

Vacuum sealing function: 4 levels Sealing only:

This process does not have any preservation effect. Used to simply close bags, store delicate products, save products such as crisps, bread, biscuits.

Minimum vacuum:

Used to pack delicate, pressure sensitive products such as salad, strawberries, berries and those which are sensitive to volume loss such as mousse, whipped cream and fresh cheeses.

Medium vacuum:

Used to preserve cooked or uncooked food which is sensitive to pressure, such as fish, meat on the bone, whole shellfish, courgettes, tomatoes, aubergine, sauces or soups.

Maximum vacuum:

Used to preserve less delicate cooked or uncooked food, such as potatoes, carrots, meat or products with liquid such as vegetables preserved in oil. Seasoned cheese can also be stored.

Chef function

Using this function, food can be marinated, allowed to ripen or be subject to cold infusion. Lasting 8-12 minutes, this program replaces traditional marinating which would generally take 24-72 hours. Ideal for marinating and massaging meat and fish as well as for the preparation of sauces, syrups, infusions and concentrated products.

Sealing function: 3 levels

Set the sealing level of the bags with this function. By selecting this symbol, three levels of sealing can be activated.

Level 1:

Used for thin bags, even if not specifically for vacuum sealing.

Level 2:

Used for all vacuum sealing bags designed for preserving food.

Level 3:

Used for all vacuum sealing bags designed for preserving and cooking food.

Vacuum sealing in a container

Containers can also be used for vacuum sealing food. There are three levels of vacuum sealing depending on the size and type of the container.

Feel multiprogram oven

The 60cm Multiprogram oven has 11 manual cooking programs and a temperature probe. The Touch Control digital controls let you select the cooking programs and other functions by simply touching the display.

FEEL MULTIPROGRAM OVEN General features and optional elements

Capacity and cooking levels

 The ample 60 litre cavity means that a number of dishes can be cooked, arranged on different levels. Large quantities of food can be cooked simultaneously, thereby saving time and energy.

Easy clean lining

 The vitreous structure of the easy clean enamel makes the surfaces perfectly smooth so that cooking grease and oils simply slide off for easy cleaning.

Temperature probe

 The temperature probe, available as standard in the Feel multiprogram oven, detects the temperature of the food being cooked, so the door does not have to be opened. A buzzer signals that the set temperature has been reached and cooking automatically stops.

Equipment

 Feel ovens are equipped with side racks, two easy clean enamelled steel trays, one of which with a depth of 5cm, handle for the drop tray and two pairs of telescopic oven rails with a locking device at the end of the run which makes food and cooking instruments easier to handle and remove.

Pizza function

The pizza function activates a rapid cooking program, quickly heating up the oven, also suitable for bread, flans and fruit tarts.

Touch Control commands

 Feel ovens have a digital programmer with touch sensitive Touch Control commands, for setting the times and functions.

Pizza plate

Plate made of refractory material ideal for pizzas, fancy breads and frozen foods.

28

code 1PP60

Standard equipment: stainless steel handle, tangential cooling fan, side racks, internal light, temperature probe, 1 deep easy clean enamelled steel tray, 1 easy clean enamelled steel tray, 1 stainless steel rack, 2 pairs of telescopic oven rails, handle for the tray.

FUNCTIONS

Static oven

Top heating element + bottom heating element. For any dish, particularly suitable for baking cakes, pizzas, roasts and timbales.

Warming oven / Heating dishes

Bottom heating element. Warming biscuits, tarts and savoury pies.

Grill

Central top heating element. Meat of small to medium thickness and toasting bread.

Lower heating element and rack

Central top heating element + lower heating element. Particularly suitable for roasts. Any cut of meat can be used, regardless of its size.

Maxigrill

Central top heating element + top heating element. Ideal for cooking large dishes au gratin and browning foods more quickly.

Fanned maxigrill

Central top heating element + top heating element + fan. Roasts are cooked evenly and are browned at the same time. Ideal for grilled foods. Particularly suitable for large foods such as poultry and game. For best results, put the meat directly on the oven rack with the drip tray beneath to collect the cooking juices.

Fan assisted oven

Top heating element + bottom heating element + fan. Rapid and even cooking. Also recommended for biscuits and pastries.

Fan assisted multilevel oven

Circular heating element + fan. For cooking similar or different dishes arranged on up to three shelves.

Pizza

Special function for cooking pizzas, flans, or fruit tarts.

Low heat cooking

A special function for cooking meat in sauce and stews in a traditional way and for recipes that require "slow cooking", with particularly long cooking times at low temperature.

Rapid defrost function

Rapid and optimal operation.

Feel pyrolytic oven

Pyrolysis is a process that decomposes waste material using high temperatures. The oven has this special function. During the cleaning cycle, the internal temperature reaches approximately 500 °C, breaking down food residue that remains within the oven cavity and which can subsequently be removed by simply using a dampened cloth.

FEEL PYROLYTIC OVEN General features and optional elements

Pyrolysis levels

The pyrolysis function can be programmed according to 3 levels of duration and intensity, to be selected according to the quantity and type of food residues present in the oven.

Door and automatic door locking

The door is made up of 4 heat-reflecting glass panels to guarantee low temperatures of the external panel. It is equipped with a device that automatically locks the opening upon activation of the pyrolysis function. The pyrolytic oven also has a particular seal, resistant to high temperatures.

Equipment

The Feel oven is equipped with side racks, two easy clean enameled steel trays, one of which with a depth of 5 cm, handle for the drop tray and two pairs of telescopic oven rails with a locking device at the end of the run which makes food and cooking instruments easier to handle and remove.

VELVET

Velvet is a collection with a minimal, elegant and pure design, in perfect aesthetic symbiosis with any household appliance and modern interior furnishings. Velvet combines technological elegance with sophisticated style.

VELVET TOUCH SCREEN OVENS features

Touch Screen Display

The Touch Screen display, with its 16 million colours, is an interactive system that allows you to control the numerous functions of the Velvet ovens by simply touching the appropriate symbol. A prodigy of technological excellence that is extraordinarily easy to use thanks to the smart software which let you set and customise programs, follow instructions and diagnose possible operating errors. In a choice of 8 languages.

USB port

It let you update the software, enter functions and upload images in order to personalise the Touch Screen display. Updates can be downloaded from the Velvet section on the Barazza website.

FUNCTIONS

Manual cooking functions

Static oven, warming oven, browning oven, grill, fanned grill, fan assisted oven, bread/pizza and rapid heat up, fan assisted multilevel oven, rapid defrost function and keep warm function: 10 manual cooking programs with programmable duration and stop.

Automatic cooking programs

Velvet ovens, as well as the 10 manual cooking programs also have 16 preset programs: meat and pizza (frozen pizza, fresh pizza, bread), meat and fish (roast pork, roast veal, roast lamb, chicken, whole fish, fish au gratin), vegetables (roast potatoes, grilled vegetables, tomatoes au gratin), timbales(lasagne, pies), cakes (sponge cake, tarts). Once you have selected the function, the relative cooking mode automatically activates.

Customisable cooking programs

Manual functions and their combinations can be saved, generating a list of up to 36 customised functions.

Child safety lock

A particularly useful device for households with children; it locks display functions, preventing accidental activation or modification of the settings.

Blackout memory

In case of a blackout, the system automatically saves the settings.

Oven safety switch-off

It turns on automatically 4 hours after the manual cooking function starts. A buzzer sounds and the oven switches off in order to save energy and prevent overheating.

VELVET TOUCH SCREEN OVENS

features

Automatic side-opening door

In the side-opening door models, the door opens to the right or left from the Touch Screen display. It is easier to check the cooking process and remove the food, especially if the oven is fitted in a tall unit. When the opening angle reaches 110 degrees, the door stops through a safety locking device that avoids knocking or damaging furniture.

Handle design

On some models, the door of the Velvet ovens have an elegant linear handle in stainless steel for both the traditional front opening as well as the side opening.

Colours

Black

The oven door is made of black glass, a colour that primarily emits refined elegance and simplicity.

White

The oven door is also made of white glass, in order to produce a pleasant minimalist visual effect.

Mirror

The door is available with a "mirror" finish, to enrich and add a hint of glamour to the kitchen.

Stainless steel

This is the finish par excellence in terms of electrical household appliances, selected for its hi-tech features. Available with a satin or vintage finish.

Stainless steel internal lining

The internal oven lining of Velvet ovens in stainless steel is also available in 18/10 type stainless steel.

MICROWAVE

The Microwave oven completes the range of Barazza ovens, combining ease of use and immediate operation with a design with rigorous aesthetic purity, thanks to the elegant stainless steel finish. The highly functional and versatile microwave oven allows a simpler and faster preparation and cooking of food, lending itself to different installation solutions.

MICROWAVE features

Installations

The microwave is available in both the overbench and built-in version thanks to the stainless steel frame with a satin or vintage finish.

Digital programmer

It is equipped with a digital programmer to manage cooking cycles. The time, the food type or function, the set cooking time and the selected weight appear on the display.

Extractable turntable plate

For evenly cooking dishes without the need to actually handle them. It can also be used as a serving plate. The internal oven lining made entirely of 18/10 type stainless steel.

BUILT-IN INSTALLATION METHOD

60 cm oven +
built-in microwave oven

MICROWAVE

FUNCTIONS

Defrost function

Rapid and optimal operation.

Rapid defrost function

Recommended for food weighing more than 500 grams. The level and weight must be set. Operating level 1 for meat, fish, vegetables and beverages; level 2 for bread, sandwiches and pasta.

Low heat cooking

For cooking fish and poultry and finishing off dishes prepared using the cooking function.

Heating

For rapidly heating foods to the desired temperature.

Cooking

To rapidly cook food.

Low grill

For cooking au gratin and browning delicate foods.

High grill

For grilling meat and fish.

Microwave + grill

The microwaves provide rapid and even cooking. Combined with the grill, food can be grilled and browned. Ideal for cooking au gratin and browning foods of reduced thickness using the raised removable grill rack.

Craquine

For rapid cooking to create crisp, delicious and golden dishes, comparable to those that come out of a traditional oven; always use with the pizza/baking tray.

AUTOMATIC COOKING PROGRAMS

After having selected the type of food, the weight and the function (defrosting, heating, cooking, grill and microwave), the oven will automatically calculate the cooking time.

HOBS

Barazza produces many different types of hobs, each one different from the next in terms of aesthetic and functional qualities. These include gas hobs, as well as hobs for more specific cooking methods such as barbecuing, Teppanyaki and induction cooking, all of which can be coordinated with ovens, hoods, sinks and taps in each collection. Their versatility is also reflected in the many installation and size options: Barazza hobs stand out for the way they integrate perfectly with any kitchen.

HOBS types and features

Chef double ring 3.5 kW

It guarantees professional results, thanks to two flame rings that evenly distribute heat to the base of the cooking instrument. The flame is directed so that it is concentrated on the centre of the burner, making cooking even more rapid.

Double ring

Two flame rings that use the power provided by the flame as best and as evenly as possible, in order to ensure rapid and even cooking.

Double ring 5 Kw

A burner that guarantees high performance thanks to its high power. For greater precision when cooking, two knobs control the 0.8 kW inner flame, the 4.2 kW outer flame or both. Also suitable for cooking with a wok.

Triple ring

The three flame rings significantly increase the power of the flame, ensuring even faster cooking.

Double gas fish burners

Two flames in close proximity; their position allows for the use of large cooking instruments whilst they evenly distribute the heat to the base of these cooking instruments.

Barbecue

It is electrically operated and made of lava stone; it absorbs fats and prevents the formation of smoke. The heating element is placed under the grill in order to avoid the formation of smoke caused by contact with cooking juices. The cooking quality is comparable to traditional cooking on an open fire.

Teppanyaki

Electric stainless steel hotplate, 6 mm thick, on which you can cook meat, fish and vegetables without the need for seasoning. The two cooking zones which can be used individually or jointly, prevent the flavours from mixing of the different dishes to be cooked. It is equipped with a thermostat and can be cleaned using a small quantity of carbonated water, washing-up detergent and a stainless steel brush.

Induction

Heat is only generated at the base of the pan and is directly transmitted to the food to be cooked. Thanks to the 90% yield, cooking times are notably reduced. The surface remains cool, making the hobs even safer and facilitating cleaning.

Hob structure

With the moulded hobs, deep-drawn stainless steel is purposely produced so that overflow liquids are trapped and subsequently can easily be removed. With hobs boasting completely level surfaces, any infiltration through the seals is completely avoided.

Easy installation

Barazza hobs consist of a single unit that makes it easy to install with tops. This is also helped by the fact that no air adjustment is required with either methane or liquid gas operated hobs.

HOBS installations

Flush-top (FT)

For Lab, Lab Cover, Select Plus Flat, Tao, Officina hobs. The hob is perfectly aligned with the top, to create a never-ending surface.

Lowered edge built-in (LEB)

For Unique and Select Plus hobs. The edge rounds off with an oblique angle.

Flat edge built-in - (FEB)

For Lab, Lab Cover, Select Plus Flat, Tao, Officina hobs. The edge is perceptible only to the touch and facilitates installation.

Bevelled glass edge built-in Green (BGB)

The glass edge rounds off at the front with an oblique 45° angle, enriching the aesthetic feel of the Green Induction hobs.

Square edge built-in (SQEB)

For B_Free hobs. The curved edge rests on top.

Flat glass edge built-in (FGB)

For glass ceramic Mood hobs and Space and Flat induction hobs. The lines of the glass are emphasised by the built-in installation which clearly shows its thickness.

High edge built-in (HEB)

For Wolo hob. The substantial thickness of the edge which rests on the worktop, gives a strong aesthetic feel, just like the Wolo line.

4 mm edge built-in (EB4)

Full stainless steel, 4 mm thick, makes the Mood hobs a perfect example of design and sophistication.

GAS HOBS

General features and optional elements

Stainless steel or cast iron pan supports

 Made of cast iron, just like those used in professional kitchens, they are particularly solid, resistant to heat and therefore long-lasting. They improve the distribution and maintenance of heat. Special rubber tips ensure stability and eliminate the risk of scratches to the surface. Lab hobs are also available in an elegant version with stainless steel pan supports and cast iron burner caps.

Soft-Touch pan supports

SOFT TOUCH

The Soft-Touch cast iron pan supports on the Mood hobs are particularly solid and resistant to heat. The particular feature of these pan supports is that they are pleasant to the touch and are dishwasher safe.

Flat Eco-design burners

FLAT ECO-DESIGN

The special design of the Flat Eco-design burners on the Mood hobs generates a vertical flame which allows greater efficiency and reduces energy consumption, and ensures uniform cooking.

Eco-flame

Burners with steady flames and hotplates, which provide high heat yields, accompany the Barazza gas hobs; they optimise energy consumption and reduce toxic substance emissions by more than 50% when compared to the regulatory requirements.

Automatic ignition and rapid safety valve

The gas is ignited and adjusted with one hand using the knob. With all Barazza gas hobs, the spark plug is inside the burner, under the cover, away from liquids which may drip from the cooking equipment and from any damage which may be caused during cleaning. The rapid safety valve blocks the gas flow, even with the tap on, if the flame accidentally goes out. It is activated when the burner is alighted and, thanks to the rapid thermocouple, it takes just seconds to function.

Extractable one-piece burners

Barazza gas hobs are equipped with easily removable one-piece burners, greatly facilitating cleaning operations.

Air inlets

Barazza gas hob burners draw in the air needed for combustion from above. This ensures that the movement of any unit doors below does not create air flow that may affect normal operation.

Cast iron wok adapter

For using woks for frying, stewing, sautéing, braising or steam cooking. Suitable for burners with triple and double flame ring 4 and 5 kW.

Grill

Ideal for grilling meat, fish and vegetables. It can be used with B-Free and Officina gas hobs.

MOOD HOBS features

Functionality

A surprisingly solid 4 mm hob makes these a perfect example of design and sophistication, and provides professional results. In addition to the stainless steel version, Mood hobs are also available in the glass ceramic version (black or white), all equipped with excellent aesthetic and functional features.

The coming together of sustainability and energy savings for a combination of ideas which gives life to a new direction in the kitchen.

MOOD HOBS features

Design

 Minimalism, purity and flow. Solid stainless steel, 4 mm thick, makes this line a perfect example of design and sophistication.

4 mm stainless steel AISI 304

 A surprisingly solid 4 mm hob providing professional results.

Vertical flame

 The special design of the Flat Eco-design burners generates a vertical flame which allows greater efficiency and a reduction of energy consumption, less heat loss and ensures uniform cooking.

Double ring 4 kW Flat Eco-design

 Double ring 4 kW Flat Eco-design with Soft-Touch pan supports. The result is high performance levels in terms of cooking and speed.

Soft-Touch cast iron pan supports

SOFT TOUCH

 The new cast iron Soft-Touch pan supports are pleasant to touch, more resistant and offer a real advantage in that they are dishwasher safe.

Knobs

The special design of the knobs recalls the geometry of the burner to give the hob a perfect balance of shapes.

LAB

The Lab hobs are a reference point in the category of high-end appliances, thanks to a sophisticated, minimal, hi-tech design.

Their flush never-ending surfaces make cooking safer and more manageable. Available with gas burners, Touch Control induction plates and in the innovative version with a cover, the Lab hobs are leaders in cutting edge design.

LAB HOBS features

1 Design

Minimalism, purity and flow. A design with a hi-tech feel, combining functionality, elegance and practicality.

2 Flush pan supports and integrated burners

The flush pan support with integrated burners is ideal for creating never-ending surfaces.

Stainless steel or cast iron pan supports

Made of cast iron, just like those used in professional kitchens, they are particularly solid, resistant to heat and therefore long-lasting. They improve the distribution and maintenance of heat. Special rubber tips ensure stability in addition to preventing scratches to the surface. Lab hobs are also available in an elegant version with stainless steel pan supports and cast iron burner caps.

Standard equipment: automatic ignition, safety valve, Eco-flame, fixing clips.

Double ring 3.5 Kw

Two flame rings that use the power provided by the flame as best and as evenly as possible, in order to ensure rapid and even cooking.

Lab Cover

The innovative Lab Cover hobs allow the work area to be completely covered, transforming it into a clean, linear unique worktop. Barazza also provides teppanyaki plates, typically used in Japanese cooking. Culinary art, innovation and stage presence, for a hob that promises to become the focal point of the entire kitchen.

B_FREE

B_Free hobs let the user combine different methods of cooking, putting technology, design and versatility on the same level. B_Free hobs, extremely practical because of their modular nature, are available in 5 kW, Chef, induction, barbecue, teppanyaki cooking styles in different sizes.

B_FREE HOBS types

Chef double ring 3.5 kW

 It guarantees professional results, thanks to two flame rings that evenly distribute heat to the base of the cooking instrument. The flame is directed so that it is concentrated on the centre of the burner, making cooking even more rapid.

Double ring 5 kW

 A burner that guarantees high performance thanks to its high power. For greater precision when cooking, two knobs control the 0.8 kW inner flame, the 4.2 kW outer flame or both. Also suitable for cooking with a wok.

Induction

 With induction cooking, heat is only generated at the base of the pan and is directly transmitted to the food to be cooked. Thanks to the 90% yield, cooking times are much quicker. The surface remains cool, ensuring safety and making cleaning easier.

Barbecue

It is electrically operated and made of lava stone; it absorbs fats and prevents the formation of smoke. The heating element is placed under the grill in order to avoid the formation of smoke caused by contact with cooking juices. The cooking quality is comparable to traditional cooking on an open fire.

Teppanyaki

Electric stainless steel hotplate, 6 mm thick, on which you can cook meat, fish and vegetables without seasoning. It is divided into two cooking zones which can be used individually or jointly, without mixing the flavours of the different dishes to be cooked. It is equipped with a thermostat and can be easily cleaned with a small quantity of carbonated water and washing-up detergent, using a stainless steel brush.

B_Free Vintage

Some of the B_Free cooking solutions are now also available in a special vintage finish, providing a deliberately 'lived-in' appearance. The possibility of combining hobs with sinks and bowls with the same finish makes everything aesthetically pleasing and functional, also because it is easy to clean and practical to use.

Stainless steel vintage finish

The vintage finish is the perfect example of something 'handmade': unevenness, skilful craftsmanship and the certainty of owning something unique. Each and every vintage steel object is unique, cannot be replicated and is truly yours.

INDUCTION

In induction hobs, the genesis of heat takes place exclusively on the bottom of the pan which transmits it directly to the food, significantly speeding up cooking times. The surfaces of the hobs remain cold, ensuring greater safety and facilitating cleaning.

INDUCTION HOBS features

Touch Control

The Touch Control allow you to individually regulate each cooking zone.

Cooking end timer

This allows the time to be set for automatic deactivation of the selected cooking zone, ranging from 1 to 99 minutes.

Selective detection of cooking instruments

The induction hotplate will only function if the hob detects the presence of a suitably sized metal cooking instrument on it, thereby preventing other metal objects left on the hob from accidentally causing it to switch on. The magnetic field is restricted to the surface of the base, keeping the temperature low in the surrounding area and enabling any spilt food to be removed easily.

Electronic child-safety lock

The control locking device prevents the hobs from being accidentally activated by children.

Residual heat indicators

The symbol H on the display indicates the presence of residual heat, generated by the heat radiated at the base of the cooking instrument.

Anti-overheating system

In the instance of overheating, the temperature automatically lowers thanks to a sensor that detects overheating on all hob components.

Safety switch-off

The appliance is equipped with a safety system which automatically switches off the cooking zones once the activation time limit has expired at a given power level.

Booster Function

It further reduces the cooking time when using a single cooking zone increasing power to the maximum level for a specific amount of time. It is especially useful for rapidly heating large quantities of liquids.

Cooking instruments (saucepans, pans etc.)

To ensure that induction hobs function correctly, we recommend using cooking instruments with a flat base made of 410 type stainless steel or similar types, or, at least, with high metal content, which have a manufacturer's symbol indicating that they are suitable for induction cooking (aluminium, glass, terracotta or ceramic instruments are not recommended).

ADVANTAGES OF USING INDUCTION HOBS

- High yield and minimal heat loss.
- Limited energy consumption for the time period in which the cooking instrument is on the hotplate.
- The rapid cooking times are comparable to microwave cooking: two litres of water can reach boiling point in approximately 5 minutes, with subsequent electrical energy saving.
- Immediate heating of cooking instruments.
- Food does not stick to the base and flavour is improved, allowing for reduced amounts of seasoning and fats, thank to the consistent, even heat.
- The surrounding hob surface remains cool.
- Once the cooking instrument has been removed, the relative cooking zone deactivates: the risk of leaving the area activated and the risk of accidentally activating areas upon contact with small metal objects, are therefore avoided.
- Peace and quiet, owing to the fact that the hob does not generate any noise.
- Easy cleaning thanks to the smooth and airtight surface; nothing is able to stick to it.
- Aesthetically pleasant.

SPACE INDUCTION

The essence, the power and two sizes to choose from: Space is an efficient and elegant induction hob, which invites you to broaden your horizons thanks to the two generous sizes of 80 and 90 cm. A hob which has been perfected thanks to the complete range of functions available: from the multislider Touch Control, to the Bridge function, to the Booster, to the automatic pan recognition and to the more traditional pause and reminder keys, cooking end timer and automatic programmer.

SPACE INDUCTION functions

Selective pan detection

 With this function, when a pan is placed on the hob, the relative zone is automatically activated and the corresponding slider activates indicating "0". The power of the cooking zone can now be selected.

Bridge function

 This function allows two vertically adjacent cooking zones to be connected, thereby increasing the area on which the pans can be placed. It is particularly useful when cooking with large pans (for example oven dishes and sauté pans). The function is activated by simultaneously pressing the Booster keys of the two adjacent cooking zones. The selection is confirmed on the side of the display by the "U - Π" symbols, and the power setting of the bridge cooking zone is enabled by the front cooking zone slider. The function can be deactivated by simultaneously pressing the Booster keys.

Pause and Reminder function

 When at least one cooking zone is in operation, the appliance can be paused thereby interrupting cooking temporarily. Press the Pause key to activate this function. The relative LED activates and "||" will appear on the display in all the cooking areas. All of the cooking end timers which are active at that moment are stopped. The pause can last a maximum of 10 minutes, after which time the appliance will switch off. To deactivate the Pause function, press the Pause key and slide your finger to the right along the flashing slider within 10 seconds. Also equipped with the Reminder function, Space hobs let you resume the functions which were previously active within 6 seconds, if the hob is accidentally switch off.

SPACE INDUCTION functions

Automatic cooking at 3 operating levels

The hob has 3 special programs which have already been set to carry out specific cooking processes.

- 1) The "Warming" program sets the power of the selected cooking area to 42 °C to keep cooked food warm.
- 2) The "Melt" program sets the power of the selected cooking area to 70 °C to melt chocolate, butter or other similar foods.
- 3) The "Simmer" programme sets the power of the selected cooking area to 94 °C to bring sauces, soups and stews to simmer.

Booster

Cooking end timer

This function lets you set the time for automatic deactivation of a cooking area, ranging from 01 (1 minute) to 99 (99 minutes).

This function reduces the cooking time of an area further, bringing it to the maximum power level for 10 minutes. This function is useful for heating large quantities of liquids extremely quickly.

COOKER HOODS

general features

The original collection of Barazza cooker hoods offers different model types in stainless steel with high-performing, technically efficient, energy-saving engine powers. Each cooker hood is made to best meet the requirements of space and functionality: wall, island, ceiling, downdraft and built-in canopy. The refined aesthetics of the cooker hoods mean that they can be perfectly coordinated in terms of shapes and materials with all Barazza products.

Stainless steel

The whole cooker hood structure and its parts are in AISI 304 stainless steel.

1 Design steel filters

The filters are made of AISI 304 stainless steel and stand out for their unusual and refined design.

Engine power

Barazza cooker hoods have a power of 800/1000 cubic metres an hour.

2 LED bar

Barazza cooker hoods are equipped with an elegant and functional LED bar which is long-lasting and efficient, and reduces energy consumption.

Remote control

B_Ambient and B_Draft cooker hoods are both supplied with a remote control. This is used to activate the LED bar and select the required speed.

Optional filter extraction

Barazza cooker hoods extract and absorb unpleasant odours which are then conveyed outside the kitchen via a specific outlet. The filter option allows air to be absorbed, which is then filtered and sent back into the kitchen.

Remote engine

On request, B_Ambient and B_Draft cooker hoods can be fitted with a remote engine.

B_AMBIENT

B_Ambient is the innovative ceiling-mounted cooker hood with a cutting-edge design that frees space, significantly increases the field of vision and acts as a lighting element, thus offering important advantages in terms of practicality and aesthetics.

It is available in the stainless steel version with LED bar, or with a white glass panel.

B_AMBIENT COOKER HOODS features

Perimeter extraction

Perimeter extraction is an innovative extraction system in the cooker hood made up of a panel that only allows the air to pass along the edges. Perimeter extraction brings great aesthetic and technical advantages: the cooker hood has no air inlet hole and this allows complete creative freedom at the design stage; the extraction speed is increased thanks to the reduction of the extracting surface area (Venturi effect); the panel slows down the flow of air to make the system quieter. Unlike traditional anti-grease filters, the panel has a smooth surface which facilitates daily cleaning operations.

Remote motor

The remote motor can be installed, on request, on all versions of the B_Ambient cooker hood.

Standard installation

The B_Ambient cooker hood can be easily installed in the ceiling.

Installation with frame

Thanks to an innovative steel frame, the body of the B_Ambient cooker hood can be concealed inside the frame preventing the need for a false ceiling.

Remote control provided

The B_Ambient cooker hood is equipped with a practical remote control which allows it to be controlled at a distance.

Air circulation

By selecting this function, at any given time, the cooker hood activates for 10 minutes at the second speed, allowing the air to be changed.

The B_Draft cooker hood can reach a height of 50 cm which ensures excellent extraction.

Remote engine

The remote engine can be installed, on request, on all versions of the B_Draft cooker hood.

STEEL

Steel cooker hoods, available in the 90 cm and 120 cm versions with a satin finish, coordinate perfectly with all Barazza hobs and sinks and give the room a striking look.

Advice for installation

SINKS

Barazza sinks stand out for their advanced aesthetic style and completely ergonomic design. They offer great functionality and a widely differentiated range of single or double bowls, with or without drainer, available in different shapes and sizes.

SINKS

general features

Extra-thick stainless steel

Barazza sinks use extra-thick stainless steel AISI 304 that is completely recyclable, resistant to corrosion and does not degrade over time and is extremely hygienic.

Mixer tap hole

Barazza sinks are designed with a 3.5 cm tap hole, meaning a hole does not need to be made in the kitchen worktop. Many models in steel can be customised on request, adding a second or third hole for the addition of a remote control or, alternatively, a practical soap or detergent dispenser. Soul sinks are designed to be used with 3 or 5 holes.

Round basket strainer waste

Barazza basket strainer wastes are approved by LGA, certifying 100% conformity with standard EN274. Stronger, thanks to the increased thickness of the stainless steel and plastic materials, they are equipped with a seal that ensures the water remains in the bowl, in full compliance with regulations, even if the bowl is dirty. Maximum water-tightness is guaranteed for the seals between the trap and the basket strainer waste. The screw is protected by a brass bushing in order to avoid deformation of plastic components due to thermal shock. The 3½" basket strainer waste allows the Barazza waste disposer to be used (compatibility with waste disposers made by other manufacturers is not guaranteed).

Square basket strainer waste

Some bowls are equipped with a plus square basket strainer waste, coordinated with the bowls and perimeter overflow.

Pop-up

It allows you to empty the bowl without having to place your hands inside the bowl itself. Useful for preventing splashes or burns if hot water is being used.

Overflow

The device is provided with all Barazza sinks and acts as a safety feature if the taps are left running. Depending on the aesthetic design of the sink, the overflow may have slots or be on the perimeter.

Taps and accessories functionality

Barazza offers a full range of coordinated taps and functional hi-tech design accessories, such as stainless steel bowl covers; polished steel baskets; iroko, polyethylene or HPL chopping boards; and colanders, designed to improve your work in the kitchen.

Capacious bowls

Sinks are equipped with space saving, high-capacity bowls.

Reversible sinks

Some sinks are reversible or can be installed with the drainer on the right or the left.

Space-saver trap

A reduced size trap allows easier use of the space under the sink.

SINKS

installations

Flush-top (FT)

For Easy, Lab, Lab Cover and Tao sinks. It aligns perfectly with the top, to create a never-ending surface.

Lowered edge built-in (LEB)

For Unique, Easy, B_Open, B_Fast, B_Level and Select sinks. The edge rounds off with an oblique angle.

Flat edge built-in - (FEB)

For Easy, Lab, Lab Cover and Tao sinks. The edge is perceptible only to the touch and facilitates installation.

Square edge built-in (SQEB)

For B_Free sinks. The curved edge rests on top.

Standard edge built-in (SEB)

For B_Fast corner sink.

4 mm edge built-in (EB4)

For Mood sinks.

High edge built-in (HEB)

For Soul sinks.

MOOD features

1 4 mm Stainless steel thickness

Steel has never been with this thickness, and its quality never so apparent.

2 Applied bowl with radius "12"

The skilled workmanship ensures the 4 mm thick edge does not go unnoticed.

3 Supporting surface with grooves

Grooves along the surface extend beyond the edge as they meet the bowl, opening up a new channel for the water to flow down.

4 Pop-up plug

Its cylindrical shape seals the pure shapes of this collection. It allows you to empty the bowl without having to place your hands inside the bowl itself. Useful for preventing splashes or burns if hot water is being used.

Mood Kit sinks

When design refuses to compromise on functionality: the Mood Kit sink includes a black HPL chopping board and a Roll-Up multi-purpose rack, which can be used as a drainer or trivet. It is also easy to store in small spaces as it can be rolled up. The Mood Top mixer tap in stainless steel AISI 316 completes the range, for a work space which combines aesthetics and practicality to perfection.

B_OPEN SINKS features

1 Perimeter overflow

This is a safety feature in the event a tap is left running; the overflow hole is on the perimeter.

3 Pop-up plug

It allows you to empty the bowl without having to place your hands inside the bowl itself. Useful for preventing splashes or burns if hot water is being used.

2 Bowl with radius "15"

B_Open sinks are available with radius "15" bowls.

4 Glass bowl cover

The elegant glass bowl cover completes the functionality of the sink.

Soap dispenser

In place of the pop-up plug, the practical soap dispenser can be inserted in the B_Open sink.

LAB SINKS features

Sinks with radius "0"

Lab sinks are available with the elegant bowls radius "0", with or without lowering and in the Lab Cover version.

Bowls with lowering

The 60 cm and 90 cm sink bowl is equipped with a lowering that makes sliding the accessories functional in the work space.

Pop-up plug

Lab sinks are equipped with a pop-up plug that allows you to empty the bowl without having to place your hands inside it. Useful for preventing splashes or burns if hot water is being used.

SELECT SINKS features

1 Extra-thick steel

The Select sinks are made from extra-thick AISI 304 stainless steel which is fully recyclable, resistant to corrosion and extremely hygienic. It also does not alter over time.

2 Dotted surface

The exclusive Select texture with a circular pattern gives the sink a unique style, typical of Barazza products.

Wide range

Select sinks meet all space requirements, thanks to the different sized models, with one or two bowls, with or without a draining board, and they coordinate perfectly with the new hobs in the Select Plus range.

SOUL SINKS features

1 B_Granite

A technical material obtained from the union of natural granite and acrylic resin, maintaining the best qualities of the granite: high resistance to impact and the most violent thermal shock. Aesthetically speaking B_Granite preserves the appearance of the natural material but improves its performance, thanks to a special treatment that reduces the particle size. This makes it less porous, more resistant to stains, more hygienic and easier to clean.

2 Stainless steel drain cover

A practical accessory which, in addition to performing the practical function of a plug for the bowl, also significantly improves the aesthetics.

Coordinated taps

These sinks coordinate perfectly with the taps in the Soul collection, available in black and white.

Accessories

SQUARE BOWLS

A wide range of modular Square Bowls, available in numerous variants; each bowl can be selected according to individual taste and freely matched to all Barazza products.

BOWLS R. "15" page 340

VINTAGE BOWLS R. "15" page 344

BOWLS R. "12" page 348

BOWLS R. "0" page 352

SOUL BOWLS page 356

SQUARE BOWLS

Barazza provides a wide selection of dimensions, varied radius types and diverse installation solutions: flush, built-in and undermounted; a wide range of matching taps are also available.

SQUARE BOWLS features and installation

Round basket strainer waste

Barazza basket strainer wastes are approved by LGA, certifying 100% conformity with standard EN274. Stronger, thanks to the increased thickness of the stainless steel and plastic materials, they are equipped with a seal that ensures the water remains in the bowl, in full compliance with regulations, even if the bowl is dirty. Maximum water-tightness is guaranteed for the seals between the trap and the basket strainer waste. The screw is protected by a brass bushing in order to avoid deformation of plastic components due to thermal shock. The 3½" basket strainer waste allows the Barazza waste disposers to be used (compatibility with waste disposers made by other manufacturers is not guaranteed).

Square basket strainer waste

Some bowls are equipped with a plus square basket strainer waste, matched to the perimeter overflow.

Overflow

The device is provided with all Barazza sinks and acts as a safety feature if the taps are left running by mistake. Depending on the aesthetic design of the bowl, the overflow may have slots or be on the perimeter.

Radius "15"

Radius "12"

Radius "0"

The bowls are available with a selection of three radius types: radius "15", radius "12", and radius "0".

Flat edge built-in - (FEB)

The edge is perceptible only to the touch and facilitates installation.

Flush-top (FT)

It aligns perfectly with the top, to create a never-ending surface.

Undermounted (UM)

The sinks are elegantly installed underneath the work surface.

Stainless steel Vintage finish

The vintage finish is the perfect example of something 'handmade': unevenness, skilful craftsmanship and the certainty of owning something unique. Each and every vintage steel object is unique, cannot be replicated and is truly yours.

Kit Vintage Square Bowls R. "15"

When functionality meets design, the Square Bowls with radius "15" provide new functionalities, thanks to the practical Kit consisting of a multi-purpose Roll-Up rack – which can be rolled up after use and stored anywhere – a durable black HPL chopping board, and a black Unique Two Shower mixer tap.

SOUL SQUARE BOWLS features

1 B_Granite

A technical material obtained from the union of natural granite and acrylic resin, maintaining the best qualities of the granite: high resistance to impact and the most violent thermal shocks. Aesthetically speaking B_Granite preserves the appearance of the natural material but improves its performance, thanks to a special treatment that reduces the particle size. This makes it less porous, more resistant to stains, more hygienic and easier to clean.

2 Stainless steel drain cover

A useful accessory which, in addition to performing the practical function of a plug for the bowl, also significantly improves the aesthetics.

Coordinated taps

These sinks coordinate perfectly with the taps in the Soul collection, available in black and white.

ACCESSORISED CHANNELS ELEGANT SYNERGIES

There is room for everything you need, and it is right next to you. The accessorised channels are designed to boost the efficiency and practicality of the work surface, ensuring that everything has its place, and optimising the way you move around the washing and cooking area.

ACCESSORISED CHANNELS elements

Socket holder

A technological solution which allows you to add electrical sockets wherever they might be needed. The practical 180° rotation system means that the sockets can be concealed beneath the elegant stainless steel cover.

Chopping board holders with chopping boards

It holds a set of three black HPL chopping boards. HPL is a highly resistant material and its properties do not alter over time. Two chopping boards can be easily joined together to create a work surface which is even bigger, more functional and more versatile.

Knife holder

Knife holder in black HPL with twelve knives, ensuring your kitchen knives are always to hand when preparing food, and have a handy place to drip-dry.

Draining rack

Elegant stainless steel draining rack, extremely useful for storage or leaving washed dishes to drain quickly.

1 Glass drainer

A useful shelf for storing glasses and small utensils to be used during cooking or to drain them after washing them. Available as a 1-unit or ½-unit element.

2 Bottle holders

Multifunctional element which can be prearranged to comfortably accommodate bottles, as well as large spoons, cutlery or herbs.

3 Colander

A practical colander that makes the accessorised channel flexible to use, providing a hand surface for the things you need near the sink or hob, such as sponges, detergents, spices, cutlery, ladles or glasses.

ACCESSORISED CHANNELS

flat edge built-in, and flush

90 cm built-in and flush channel

- extra-thick stainless steel AISI 304
- bowl with 2" basket strainer waste

ACCESSORISED CHANNELS compositions

The composition system is based on 3 types of accessorised channel, designed to accommodate 3 modules (90 cm channel), 4 modules (120 cm channel), or 6 modules (180 cm channel). Six 1 module elements (272x138 mm) and two ½ module elements (136x138 mm) are available.

Compositional freedom

The elements can be selected and positioned as required.

Functionality and rationality

Specific solutions can be created for the washing area and cooking area, as well for mixed solutions, according to your needs.

Examples of an accessorised channel

ACCESSORISED CHANNELS materials

The elements that make up the Barazza accessorised channels are made with two types of materials:

- satin-finished stainless steel AISI 304 with a high chromium and nickel content, fully recyclable, hygienic, free from toxic emissions and unalterable over time, as it is resistant to corrosion.
 - black HPL, particularly hygienic and extremely resistant to scratches, knocks, abrasions, chemical agents and heat.
- Both are robust, elegant, durable and create strong visual contrasts. The combination of these materials which differ so greatly from one another allows you to create elegant black / steel compositions, as well as all-steel solutions, according to the surrounding environment and the tastes of those spending time in the kitchen.

TAPS AND ACCESSORIES

The Taps and Accessories collection is practical and versatile with a sophisticated and contemporary style. It is made up of elements that coordinate with any type of oven, hob, hood, bowl and sink. The collection uses materials that guarantee long life and are practical to use.

3 way Glass mixer tap

“Glass” is made entirely of AISI 316 stainless steel, combining two functions in one: delivery of purified water and ordinary water from the mains. It let you use filtered, purified water only when necessary. It is an economical, ecological and safe system, designed to guarantee water that is always pure by eliminating limescale and chlorine residues, which cause unpleasant smells. It respects the environment because it considerably reduces the use of plastic, does not waste water and let you make savings in total safety.

It is practical, unobtrusive and beautifully integrated. No special installation is required. All the technology is enclosed in a cartridge which can be replaced quickly, easily and without any tools or the intervention of a specialist technician. Each cartridge delivers 3000 litres of pure water. The timer supplied with each cartridge notifies you when the cartridge needs to be replaced.

The two types of water are kept apart so that the purified water always remains separate.

POWER SOCKET HOLDER

Barazza offers technological solutions of a high aesthetic and functional level that let you power the hobs without forgetting the necessary cleaning. Built-in or flush-top, they close or lower into the work surface as required, making the kitchen tidy, bringing a minimalist feel and freeing up all the available space.

EXTRACTABLE POWER SOCKET HOLDER features

Round extractable power socket tower

The round extractable power socket tower can be used when required and, when no longer required, goes back down flush into the worktop, to leave the space free.

Square extractable power socket tower

The top power socket holder is a high-tech solution that let you power your kitchen worktops, and can be used even with the cover closed.

TOP POWER SOCKET HOLDERS features

Up top power socket holder

Top power socket holder is a high-level technological solution which allows you to bring power to the kitchen work surfaces, and can even be used when the cover is closed. Equipped with two Schuko sockets and a USB port. It can be installed built-in or flush-top.

Rotating top power socket holder

A technological solution which allows you to add electrical sockets wherever they are needed. The practical 180° rotation system means that the sockets can be concealed beneath the elegant stainless steel cover, also available in the satin and vintage finish.

Stainless steel grill

Cast iron wok adapter

- 35 For double and triple ring (excluding Mood hobs) code 1RWJ

Sealant

- For flush hobs and sinks code 1CSF

Cast iron wok adapter

CLEANING PRODUCTS

STAINLESS STEEL

Stainless steel is the name given to steel with a high chromium and nickel content because it does not rust if exposed to air and water. There are various types of stainless steel; Barazza uses AISI 304 (US trademark: American Iron and Steel Institute) consisting of 18% chromium and 10% nickel, which guarantees exceptional resistance to corrosion, easy cleaning and excellent hygiene.

For optimum maintenance Barazza recommends:

- After each use rinse well with water and dry with a clean cloth or chamois.
- Use any ordinary detergent so long as it does not contain chlorine or its compounds, such as bleach or hydrogen chloride.
- For persistent stains only use a little warm white vinegar.
- Do not use steel wool or other abrasive materials that would inevitably scratch the steel surface.
- Do not drag objects across the surface; use chopping boards or trivets while working in the kitchen.
- Do not place hot pans, ovens and table-top ovens that might cause deformations and discolouration.
- Do not leave rusty metal objects on the surface for long periods.
- Do not leave open bottles or packets of detergents or other chemical substances nearby.

EASY CLEAN CLEANING CREAM

Easy clean is a cleaning cream developed exclusively for cleaning sinks, hobs, cooker hoods, ovens and stainless steel surfaces in general. Made from top quality materials, rich in polishing pigments and nourishing substances, it respects stainless steel, removing limescale and grease marks easily. Used regularly or as required, it gives stainless steel a new shine and protection that delays dulling and dirt deposits.

EASY CLEAN MICROFIBRE CLOTH

The professional Easy Clean microfibre cloth from Barazza, thanks to its degreasing and absorbent action, removes all types of dirt from stainless steel and other surfaces, without leaving marks or smudges, and without using chemical detergents. This innovative product is extremely soft and remains effective for a long time, making it an essential tool for everyday cleaning.

CLASSIC COLLECTION

—

This series, clearly traditional in style, is made up of 90 cm and 123 cm cookers and the 123 cm sink unit. In each element the refined combination of finishes and ivory, burgundy and anthracite enamel with steel and brass make this a prestigious series with a soft yet robust character.

90/123 CM COOKER page 412

90/123 CM COOKER HOOD page 418

90/123 CM SPLASH BACK page 418

123 CM SINK page 420

90 AND 123 CM COOKERS features

Sleek lines and style for traditional, rustic or modern kitchens

Barazza cookers and sink units are made of top quality robust materials that do not degrade over time, such as stainless steel, cast iron and brass. The splash back that links the cooker hood to the cooking unit is functional and elegant, as are the different accessories, designed to further enhance the cooker. The space between the burners, the oven and the compartment below with a stainless steel drawer, epitomise convenience, user friendliness and show how Barazza skilfully designs its products.

90 cm multifunction oven

Oven with 90' mechanical timer with buzzer and manual start/end cooking timer with 7 cooking programs: static oven, warming oven, browning oven, traditional grill, fan-assisted oven, fanned grill, rapid defrost function.

Types of hobs

The hobs on the Classic Collection cookers are available in these formats: 4 gas burners and 2 triple ring burners, and 3 gas burners, a triple ring and a fish burner for the 90 cm version, and 4 gas burners, 2 triple ring burners and Fry Top for the 123 cm version.

90 AND 123 CM COOKERS features

1 Side door

The 123 cm cooker has a side door with extractable stainless steel drawers equipped with a cutlery rack, spice rack, iroko chopping boards holders and bottle holders.

2 Pull-out drawer

All the cookers have a practical stainless steel lower drawer that can be pulled out.

3 Cooker grab handle

You can choose between the version with or without a stainless steel or brass grab handle.
